The revaluation reserve represents the revaluation surplus on freehold land and buildings.

The fair value reserve relates to revaluation surplus on financial assets at fair value through OCI.

The other reserves relate to the the loss/profit arising following acquisition and disposal of subsidiaries by the Group.

The foreign currency translation reserve movement consists mostly of the exchange differences arising on the consolidation of subsidiaries whose functional currencies are denominated in foreign currencies, namely Seejay Cellular whose functional currency is USD and has investments denominated in INR and GBP.

The convertible debentures represents redeemable convertible bonds issued to a subsidiary of the Group, IKO (Mauritius) Hotel Ltd, by the Mauritius Investment Corporation Ltd, a wholly owned subsidiary of the Bank of Mauritius (Note 34).

The notes on pages 218 to 299 form an integral part of the financial statements.

#### 1 SIGNIFICANT ACCOUNTING POLICIES

#### General information

The principal activity of the Company is investment holding. The Group has different clusters, namely real estate, hospitality and tourism, retail, energy, telecommunications, financial and commerce.

The telecommunications and media cluster offers telecommunications, connectivity solutions and network infrastructure (including mobile telephony, fixed telephone and high-speed Broadband) as well as premium entertainment.

The entities in the real estate cluster are involved with the management, development of Group's portfolio of properties, including developed properties, partially developed properties and land assets and the optimisation of yields through the creation of specialised and mixed-use spaces.

The hospitality and tourism cluster includes IKO Hotel Ltd and IKO Resort Village Ltd which comprise of integrated Coastal Resort Village, placing sustainability, wellness and the modern traveller at the heart of its philosophy and it currently includes a 5\* hotel located on Le Chaland beach.

The Group's retail, financial and commerce cluster consists primarily of Batimex and ILA. Batimex provides contracting solutions, wholesaling and retailing of building materials and finishes. ILA consists of long-term life insurance and individual Personal Pension Plan delivered to the domestic market.

TotalEnergies Marketing Mauritius Ltd and Ceejay Gas Ltd form part of the energy cluster of the Group. The entities are involved in the distribution and retail of petroleum products (automotive fuels, biofuels, lubricants, Liquid Petroleum Gas and jet fuels) to retail customers, as well as to key industries of the Mauritian economy such as agriculture, hospitality, textile, construction, transport and manufacturing.

The principal accounting policies applied in the preparation of these financial statements, are set out below. These policies apply to the Group and Company, and have been consistently applied to all the years presented, unless otherwise stated.

#### Basis of preparation

In the separate financial statements, Currimjee Jeewanjee and Company Limited is referred to as the "Company" whereas the consolidated financial statements comprise the Company and its subsidiaries (together referred to as the "Group") and the Group's interests in associates.

The financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS") and interpretations issued by the IFRS Interpretations Committee applicable to companies reporting under IFRS except for IFRS 9 for one of its subsidiaries, Island Life Assurance Co. Ltd (ILA) which meets the criteria for eligibility of a temporary exemption from the application of IFRS 9 until 2023. The exemption is only eligible at ILA level and the financial statements of the Group should have been prepared applying IFRS 9 to all entities in the Group. The financial statements also comply with the Mauritian Companies Act 2001. The financial statements have been prepared under the historical cost convention, as modified by the revaluation of freehold land and buildings, investment properties, financial assets at fair value through profit or loss and financial assets at fair value through other comprehensive income.

During the year, the Group and the Company made a profit of **Rs 339,576,000** (2021 - loss of Rs 91,035,000) and a profit of **Rs 159,257,000** (2021- Rs 153,135,000) respectively. At the statement of financial position date, the Group current liabilities exceeded its current assets by **Rs 1,825,965,000** (2021 - Rs 707,706,000). In 2022, The Company's current liabilities exceeded its current assets by **Rs 228,089,000**, while in 2021, current assets exceeded its current liabilities by Rs 102,739,000.

The financial statements have been prepared on the going concern basis, which assumes that the Group will continue in operational existence for the foreseeable future. The Board is responsible for the evaluation of the Group's and the Company's ability to continue as a going concern. In this light, important projects were completed during the year 2022 across the clusters to increase the cash flow generating capability of the Group as well as its profitability. These projects include the restructure and upscaling of the real estate cluster and launching of the 5G and Fintech App for the telecommunications cluster. The Group has also embarked on key strategies which will allow it to meet its financial obligations both in the short term and the long term. This includes quarterly review of the Group Cash Flow for each period. The Group has restructured its bonds and loans to align to the market and manage its liquidity risk. The bank overdrafts limits are monitored by the subsidiaries at regular intervals to ensure that there are no breach of covenants and to maintain the proper liquidity position of the entities. These strategies will not only help the Group optimise its return on its investments but also address our future cash flow requirements in a sustainable manner. An exercise was also conducted by stress testing the Group Cash Flow Forecast for the next three years and results were positive. The Board does not intend to liquidate any subsidiaries within the Group and are not aware of any material uncertainties that may cast doubt on upon the Group's and the Company's ability to continue as a going concern. Despite the aftermath of Covid-19 and the current warfare in Russia and Ukraine, the Group and the Company shows a profitable position. In the year ended 31 December 2021, the Group showed a loss for the year amounting to Rs 91,035,000 compared to a profit of Rs 339,576,000 for the year ended 31 December 2022.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Basis of preparation (continued)

#### (a) Critical accounting estimates and assumptions

The Group and Company make estimates and assumptions concerning the future. The resulting accounting estimates will, by definition, seldom equal the related actual results. The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities are discussed below:

• Post-employment benefits

The present value of the pension obligations depends on a number of factors that are determined on an actuarial basis using a number of assumptions. The assumptions used in determining the net cost/(income) for pensions include the discount rate. Any changes in these assumptions will impact the carrying amount of pension obligations. Critical assumptions are made by the actuary in determining the present value of retirement benefit obligations. These assumptions are set out in Note 25.

• Estimate of recoverable amount of investments in subsidiaries

The recoverable amount of investments in some subsidiaries has been determined based on value in use calculations and fair value less costs to sell. These calculations require the use of estimates, including discounted cash flows based on management's expectations of future revenue growth, operating costs and profit margins for each subsidiary. The bases of these calculations are set out in note 14.

• Life assurance fund (Note 23) - estimates of future benefit payments under the long-term insurance contracts

The determination of the liabilities under long-term insurance contracts is dependent on estimates made by the actuary. Estimates are made as to the expected number of deaths for each of the years in which the Group is exposed to risk. The actuary bases these estimates on standard industry mortality tables that reflect recent historical mortality experience, adjusted where appropriate to reflect the actuary's own experience. The estimated number of deaths determines the value of the benefit payments and the value of the valuation premiums. The main source of uncertainty is that epidemics such as AIDS and wide-ranging lifestyle changes, such as in eating, smoking and exercise habits, could result in future mortality being significantly worse than in the past for the age groups in which the Group has significant exposure to mortality risk. For contracts that insure the risk of longevity, appropriate but not excessively prudent allowance is made for expected mortality improvements. However, continuing improvements in medical care and social conditions could result in improvements in longevity in excess of those allowed for in the estimates used to determine the liability for contracts where the Group is exposed to longevity risk.

Long-term business technical provisions are computed using statistical or mathematical methods. The computations are made by the Group's actuaries on the basis of recognised actuarial methods, with due regard to the actuarial principles laid down by the law and by actuarial best practices. The methodology takes into account the risks and uncertainties of the particular classes of long-term business written and the results are certified by the actuaries undertaking the valuations.

For long-term insurance contracts with fixed and guaranteed terms, estimates are made in two stages. Estimates of future deaths, voluntary terminations, investment returns and administration expenses are made at the inception of the contract and form the assumptions used for calculating the liabilities during the life of the contract. A margin for risk and uncertainty is added to these assumptions. These assumptions are 'locked in' for the duration of the contract. New estimates are made each subsequent year in order to determine whether the previous liabilities are adequate in the light of these latest estimates. If the liabilities are considered adequate, the assumptions are not altered. If they are not adequate, the assumptions are altered ('unlocked') to reflect the best estimate assumptions.

The reasonableness of the estimation process of future benefit payments is tested by an analysis of sensitivity under several different scenarios. The analysis enables the Group to assess the most significant assumptions and monitor the emerging variations accordingly.

Liabilities in relation to death and disability benefits are amortised by reinsuring the yearly sums at risk above the retention limit against payment of respective reassurance premiums. The sensitivity analysis has been disclosed in Note 3(d).

• Provision for asset retirement obligation

In one of the Group's subsidiaries the directors have estimated the costs of dismantling, removing antennas and restoring the leased sites to their original conditions which have been provided in full in the financial statements. This assumes that the effect of the inflationary increase on the costs will be minimised on discounting such costs to their present values. These assumptions and the sensitivity analysis are set out in Note 26.

• Fair value estimates of property, plant and equipment

The fair value at 31 December 2022 comprises the best estimate of market value by independent valuations performed by external property valuers. The best evidence of fair value is the current price in an active market for similar properties as set out in Note 10.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

- (a) Critical accounting estimates and assumptions (Continued)
  - Fair value estimates of investment properties

The fair value at 31 December 2022 comprises the best estimate of market value by independent valuations performed by external property valuers. The best evidence of fair value is the current price in an active market for similar properties, as set out in Note 11.

Income taxes

The Group is subject to income taxes at an average tax rate 17% (2021 – 17%). Significant judgement is required in determining the worldwide provision for income taxes. There are many transactions and calculations for which the ultimate tax determination is uncertain. The Group recognises liabilities for anticipated tax audit issues based on estimates of whether additional taxes will be due. Where the final tax outcome of these matters is different from the amounts that were initially recorded, such differences will impact the current and deferred income tax assets and liabilities in the period in which such determination is made. The Group has a current tax receivable of **Rs 82.7 million** (2021 – Rs 81.1 million), refer to Note 9(a)(ii).

• Fair value of financial instruments

For financial instruments traded in active markets, the determination of fair values of financial assets is based on quoted market prices. This includes listed equity securities and quoted debt instruments on major stock exchanges. The quoted market price used for financial assets held by the Company is the current bid prices.

If the market for a financial asset is not active (and for unlisted securities), the Company establishes fair value by using valuation techniques. These include the use of recent arm's length transactions, reference to other instruments that are substantially the same, discounted cash flow analysis, and option pricing models making maximum use of market inputs and relying as little as possible on entity-specific inputs. The sensitivity analysis is set out in Note 2.

The carrying value of trade receivables and trade payables are assumed to approximate their fair values.

(b) Critical judgements in applying the entity's accounting policies

In preparing the financial statements, the directors, in the process of applying the Group's accounting policies, did not make any judgement other than those involving estimates that could have a significant effect on the amounts recognised in the financial statements.

Changes in accounting policy and disclosures

(i) New standards, amendments to existing standards and interpretation issued and effective for the first for the financial year beginning on 01 January 2022.

In the current year, the Group and Company have assessed all of the new standards other than IFRS 17, interpretations by the International Accounting Standards Board ("IASB") that are relevant to their operations and effective for accounting periods beginning 01 January 2022. There are no new standards and amendments to standards and interpretations other than IFRS 17 that are effective for annual period beginning on 01 January 2022 that would be relevant or have a material impact on the financial statements.

(ii) New standards, amendments and interpretations issued but not effective for the financial year beginning after 1 January 2022 and not adopted early

A number of new standards and amendments to standards and interpretations are effective for annual periods beginning after 1 January 2022, and have not been applied in preparing these financial statements. None of these is expected to have a significant effect on the financial statements of the Company, except as set out below.

IFRS 17, 'Insurance Contracts'

The IASB issued IFRS 17 insurance contracts in May 2017. On 25 June 2020, the IASB issued Amendments to IFRS 17 to address concerns and implementation challenges that were identified after IFRS 17 Insurance Contracts was first published in May 2017. These amendments are effective for annual reporting periods beginning on or after 1 January 2023. The standard needs to be applied retrospectively.

The Group's Insurance Company - Island Life Assurance Co. Ltd (ILA), did not do an early adoption of IFRS 17 standard. The Management of ILA expects IFRS 17 to have a future impact on the company but this impact has not yet been quantified as at April 2023.

The IASB issued IFRS 17, 'Insurance contracts', and thereby started a new epoch of accounting for insurers. Whereas the current standard, IFRS 4, allows insurers to use their local GAAP, IFRS 17 defines clear and consistent rules that will significantly increase the comparability of financial statements. For insurers, the transition to IFRS 17 will have an impact on financial statements and on key performance indicators.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(b) Critical judgements in applying the entity's accounting policies (Continued)

(ii) New standards, amendments and interpretations issued but not effective for the financial year beginning after 1 January 2022 and not adopted early (continued)

IFRS 17 'Insurance Contracts' (Continued)

Under IFRS 17, the general model requires entities to measure an insurance contract at initial recognition at the total of the fulfilment cash flows (comprising the estimated future cash flows, an adjustment to reflect the time value of money and an explicit risk adjustment for non-financial risk) and the contractual service margin. The fulfilment cash flows are measured on a current basis each reporting period. The unearned profit (contractual service margin) is recognised over the coverage period. Aside from this general model, the standard provides, as a simplification, the premium allocation approach. This simplified approach is applicable for certain types of contract, including those with a coverage period of one year or less.

For insurance contracts with direct participation features, the variable fee approach applies. The variable fee approach is a variation on the general model. When applying the variable fee approach, the entity's share of the fair value changes of the underlying items is included in the contractual service margin. As a consequence, the fair value changes are not recognised in profit or loss in the period in which they occur but over the remaining life of the contract.

The Company did not early adopt IFRS 17 standard. Management expects IFRS 17 to have a future impact on the company.

Compared to IFRS 4, IFRS 17 introduces measurement models for insurance contracts consisting of the general measurement model (GMM), variable fee approach (VFA) for contracts with direct participation features and the premium allocation approach (PAA) applicable for short-duration insurance contracts.

The main features of the general model for insurance contracts are that the groups of contracts identified:

- be measured at the present value of future cash flows incorporating an explicit risk adjustment and remeasured every reporting period (the fulfilment cash flows);
- have a contractual service margin that is equal and opposite to any day one gain in the fulfilment cash flows of a group of contracts, representing the unearned profit of the insurance contracts, is recognised in profit or loss over the service period (coverage period). This applies for profitable groups, where groups are expected to be onerous, a loss component is set up and the loss is recognised immediately.

The carrying amount of a group of insurance contracts at the end of each reporting period shall be the sum of the liability for remaining coverage (fulfilment cash flows related to future service and the contractual service margin) and the liability for incurred claims (fulfilment cash flows related to past service).

Based on Island Life Assurance's analysis of insurance policies issued, the company predominantly writes long-term contracts, therefore the general measurement method will be applied to most of the insurance book with only the Group Life business falling into the premium allocation approach.

Insurance revenue and insurance service expenses are recognised in the statement of comprehensive income based on the services provided during the period. The standard also recognises losses earlier on contracts expected to be onerous.

The standard introduces a new, more granular system of reporting for both insurance revenue and insurance contract liabilities and does not only impact accounting and actuarial reporting but has a significant impact across the company's operating model. Due to the fundamental changes required, and to ensure successful implementation, an IFRS 17 implementation project team was established – with Island Life using QED Actuaries and Consultants as their implementation partners.

The transition to IFRS 17 and the financial impact assessment will remain a key focus during 2023. For most of the insurance book, it is expected that a mix between a fully retrospective approach and a fair value approach will be applied for the transition calculations.

The IFRS 17 implementation project team will focus on the following key areas during 2023:

- Produce and request business sign-off and external audit sign-off of transition balances.
- Commence with an IFRS 4 and IFRS 17 dual reporting run.
- Finalise the layout and disclosure of the IFRS 17 compliant annual financial statements.
- Finalise the management reporting and key performance measures.
- Continue engaging with the business through various training initiatives.
- Finalise and implement future financial and data governance processes and accountabilities.
- Complete the system development and key controls required to implement IFRS 17.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

(ii) New standards, amendments and interpretations issued but not effective for the financial year beginning after 1 January 2022 and not adopted early (continued)

IFRS 17 'Insurance Contracts' (Continued)

The full financial impact of IFRS 17 has not yet been fully assessed. For the vast majority of the book of Island Life Assurance which will be measured using the GMM, the impact would be expected to be as follows:

- The best estimate liability would be expected to remain similar to IFRS 4 with differences arising due to assumption changes predominately from the discount rate (via the introduction of yield curves) and expense assumptions.
- The risk margin is expected to be similar to the current margins held under IFRS 4 with slight adjustments (and potential releases) due to margins not being held on financial risks (as is the case under IFRS 4).
- The largest impact is expected to be that a Contractual Service Margin (CSM) will be introduced which should result in an increase to the overall liabilities of the Company, especially given the fact that negative policyholder liabilities are allowed under IFRS 4.

For the minor portion of the book that will be measured using the PAA, no significant change from IFRS 4 position is expected.

IAS 16 'Property, Plant and Equipment (Amended)'

The amendment is effective for annual reporting periods beginning on or after 1 January 2022. It requires the proceeds received from selling output produced before the asset is ready for its intended use to be recognised as income in profit or loss. The related cost of producing the output is measured using the guidance in IAS 2, 'Inventories', and it is recognised as an expense in profit or loss when sold. If the items sold are the output of an entity's ordinary activities, the income and cost are disclosed in accordance with the requirements of IFRS 15, 'Revenue from Contracts with Customers', and IAS 2. If the items sold are not part of an entity's ordinary activities, the amendment to IAS 16 requires the disclosure of the amount and line item(s) in the statement of comprehensive income in which such proceeds and cost have been included. The amendment to IAS 16 also clarifies that an entity is 'testing whether the asset is functioning properly' when it assesses the technical and physical performance of the asset. The financial performance of the asset is not relevant to this assessment. An asset might therefore be capable of operating as intended by management and subject to depreciation before it has achieved the level of operating performance expected by management. The entity should recognise the cumulative effect of initially applying the amendment as an adjustment to the opening balance of retained earnings (or other component of equity, as appropriate) at the beginning of that earliest period presented. Earlier application is permitted. If an entity applies the amendment for an earlier period, it should disclose that fact.

'Onerous contracts (Amended)'

Issued in May 2020, an entity shall apply those amendments to contracts for which it has not yet fulfilled all its obligations at the beginning of the annual reporting period in which it first applies the amendments (the date of initial application). The entity shall not restate comparative information. Instead, the entity shall recognise the cumulative effect of initially applying the amendments as an adjustment to the opening balance of retained earnings or other component of equity, as appropriate, at the date of initial application. The amendments are effective for annual reporting periods beginning on or after 1 January 2022 and apply prospectively. The recognition principle in IFRS 3 specifies that the assets and liabilities recognised in a business combination must meet the respective definitions of assets and liabilities in the Framework, although, after the acquisition date, an acquirer accounts for most types of assets and liabilities recognised in a business combination in accordance with other IFRS standards applicable to those items.

IFRS 3 Business combinations- Asset or liability in a business combination clarity (Amended)'

IFRS 3 (amended), effective as from 1 January 2022, sets out how a company should account for the assets and liabilities it acquires when it obtains control of a business. Reference is made to the Conceptual Framework to determine what constitutes an asset or a liability. It includes a broader definition for liabilities when acquiring a business, hereby including provisions and contingent liabilities as per IAS 37 Provisions, Contingent Liabilities and Contingent Assets instead of the Conceptual Framework to determine what constitutes a liability.

"Financial Instruments - Amendments resulting from Annual Improvements to IFRS Standards 2018 - 2020"

The amendment is effective as from 1 January 2022. It elucidates which fees an entity includes when it applies the '10 per cent' test as per IFRS 9 in assessing whether to derecognise a financial liability. An entity includes only fees paid or received between the entity (the borrower) and the lender, including fees paid or received by either the entity or the lender on the other's behalf.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Consolidation

#### Subsdiaries

Subsidiaries are all entities (including structured entities) over which the Group has control. The Group controls an entity when the Group is exposed to, or has rights to, variable returns from its involvement with the entity and has the ability to affect those returns through its power over the entity. Subsidiaries are fully consolidated from the date on which control is transferred to the Group. They are deconsolidated from the date that control ceases.

The Group applies the acquisition method to account for business combinations. The consideration transferred for the acquisition of a subsidiary is the fair values of the assets transferred, the liabilities incurred to the former owners of the acquiree and the equity interests issued by the Group. The consideration transferred includes the fair value of any asset or liability resulting from a contingent consideration arrangement. Identifiable assets acquired and liabilities and contingent liabilities assumed in a business combination are measured initially at their fair values at the acquisition date. The Group recognises any non-controlling interest in the acquiree on an acquisition-by-acquisition basis, either at fair value or at the non-controlling interest's proportionate share of the recognised amounts of acquiree's identifiable net assets.

Acquisition-related costs are expensed as incurred.

All acquisition costs, even those directly related to the acquisition such as professional fees (legal, accounting, valuation, etc), must be expensed. The costs of issuing debt or equity are to be accounted for under the rules of IFRS 9, Financial Instruments and IAS 32 Financial Instruments: Presentation.

The Group consolidates its life assurance business, ILA, through other income in the income statement, refer to the Other income (Note 5).

• Changes in ownership interests in subsidiaries without change of control

Transactions with non-controlling interests that do not result in loss of control are accounted for as equity transactions, that is, as transactions with the owners in their capacity as owners. The difference between fair value of any consideration paid and the relevant share acquired of the carrying value of net assets of the subsidiary is recorded in equity. Gains or losses on disposals to non-controlling interests are also recorded in equity.

• Disposal of subsidiaries

When the Group ceases to have control any retained interest in the entity is re-measured to its fair value at the date when control is lost, with the change in carrying amount recognised in profit or loss. The fair value is the initial carrying amount for the purposes of subsequently accounting for the retained interest as an associate, joint venture or financial asset. In addition, any amounts previously recognised in other comprehensive income in respect of that entity are accounted for as if the Group had directly disposed of the related assets or liabilities. This may mean that amounts previously recognised in other comprehensive income are reclassified to profit or loss.

#### Associates

Associates are all entities over which the Group has significant influence but not control, generally accompanying a shareholding of between 20% and 50% of the voting rights. Investments in associates are accounted for using the equity method of accounting. Under the equity method, the investment is initially recognised at cost, and the carrying amount is increased or decreased to recognise the investor's share of profit or loss of the investee after the date of acquisition. The Group's investment in associates includes goodwill identified on acquisition.

If the ownership interest in an associate is reduced but significant influence is retained, only a proportionate share of the amounts previously recognised in other comprehensive income is reclassified to profit or loss where appropriate.

The Group's share of post-acquisition profit or loss is recognised in profit or loss, and its share of post-acquisition movements in other comprehensive income is recognised in other comprehensive income with a corresponding adjustment to the carrying amount of the investment. When the Group's share of losses in an associate equals or exceeds its interest in the associate, including any other unsecured receivables, the Group does not recognise further losses, unless it has incurred legal or constructive obligations or made payments on behalf of the associate.

The Group determines at each reporting date whether there is any objective evidence that the investment in the associate is impaired. If this is the case, the Group calculates the amount of impairment as the difference between the recoverable amount of the associate and its carrying value and recognises the amount adjacent to 'share of profit/ (loss) of an associate' in profit or loss.

Profits and losses resulting from upstream and downstream transactions between the Group and its associates are recognised in the Group's financial statements only to the extent of unrelated investor's interests in the associates. Unrealised losses are eliminated unless the transaction provides evidence of an impairment of the asset transferred. Accounting policies of associates have been changed where necessary to ensure consistency with the policies adopted by the Group.

Dilution gains and losses arising in investments in associates are recognised in profit or loss.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Consolidation (continued)

Investment in subsidiaries and associates in the Company's separate financial statements

Investments in subsidiaries and associates are recognised at cost (which includes transaction costs) in the separate financial statements of the Company.

The impairment testing of investments in subsidiaries, associates and joint ventures depends on the accounting policy choices made for the measurement of such investments. Investments in subsidiaries, associates and joint ventures that are accounted for at cost in separate financial statements are within the scope of IAS 36 Impairment of assets. The accounting for investments that are accounted for in accordance with the relevant IAS is addressed in that standard. IAS 36 requires an impairment test when indicators of potential impairment exist. Indicators of potential impairment are set out in paragraph 12 of IAS 36.

In particular, the receipt of a dividend from a subsidiary, joint venture or associate that meets the following conditions might be an internal indicator that the related investment could be impaired. The investor is, therefore, required to test the related investment for impairment where a dividend is received and there is evidence available that the carrying amount of the investment in the separate financial statements exceeds the carrying amount of the investee's net assets, including associated goodwill in the consolidated financial statements; or the dividend exceeds the total comprehensive income of the subsidiary, joint venture or associate in the period that the dividend is declared. When impairment indicators exist, a test for impairment should be performed. An impairment loss occurs when the carrying amount of the investment exceeds its recoverable amount. The carrying amount of an investment carried at cost would be its original cost less any previous impairment losses recognised. The recoverable amount of the investment is the higher of its fair value less costs of disposal and its value in use. A goodwill impairment on consolidation indicates a decrease in value since acquisition.

This will also trigger an impairment review of the parent entity's investment in the relevant subsidiary in the parent's separate financial statements. The goodwill and other net assets in the consolidated financial statements that are attributable to an impaired subsidiary will usually differ from the subsidiary's carrying value in the parent's separate financial statements. The subsidiary's net assets in consolidated financial statements (including goodwill) might be lower than the amount of the parent's investment recorded at cost. This does not necessarily mean that there is an impairment loss of the investment. The carrying amount of the investment in separate financial statements should be compared with its recoverable amount (i.e. the higher of fair value less costs of disposal and value in use), rather than the carrying amount of the subsidiary's net assets. If the recoverable amount of an investment in a subsidiary is determined by value in use, the investor's share of the present value of the subsidiary's estimated cash flows may be a proxy for value in use in separate financial statements where the parent is able to control the extraction of dividends from the subsidiary. The above is true if the subsidiary has no debt. Otherwise, the present value of expected cash flows from the subsidiaries' underlying assets should be reduced by the fair value of outstanding debt in order to determine the net amount available to equity holders. The investor's share of this net amount is the amount to use in the impairment test. When performing an impairment review of an investment in a subsidiary, it is necessary to consider non-interest-bearing inter-company balances, such as trade receivables and payables, between the parent and subsidiary. Any cash outflows payable to the parent for settlement of intercompany trading balances are included in determining the subsidiary's cash flows for use in the impairment calculation. This is because, from an entity perspective, it is expected that there will be a cash outflow from the subsidiary. Similarly, any cash inflows from the parent to the subsidiary are also taken into account. Any inter-company receivable in the parent's separate financial statements is separately evaluated based on the guidance in IFRS 9. If the recoverable amount of an investment in an associate or a joint venture is determined by value in use, the investor's share of the present value of the investment's estimated cash flows may be a proxy for the present value of dividend receipts. IAS 28 indicates that, when appropriate assumptions are used, both methods give the same result. The appropriate assumptions to align the investment's cash flows to those of the investee will principally include reflecting the fact that the investment is a minority holding. This is typically addressed through the application of a higher discount rate to the total company cash flows, reflecting the fact that the investor does not control them or the amount which may be paid as a dividend. There might be other issues which need to be addressed, such as the impact of any restrictions on dividends and the rights of other equity holders.

The Company evaluates its investments in subsidiaries for impairment annually and records an impairment loss when the carrying amount of such assets exceeds the recoverable amount. The assessment of the existence of any indicators of impairment of the carrying amount of investments in subsidiaries is subjective. In the event that indicators of impairment are identified, the assessment of the recoverable amounts is also judgmental and requires estimation and the use of subjective assumptions. The Company measures the recoverable amount of its investments in subsidiaries by using projected discounted cash flows valuation methods and net assets valuation methods.

Where an indication of impairment exists, the recoverable amount of the investment is assessed. Where the recoverable amount of an investment is less than its carrying amount, the investment is written down immediately to its recoverable amount and the impairment loss is recognised as an expense in profit or loss.

On disposal of an investment, the difference between the net disposal proceeds and the carrying amount is charged or credited to profit or loss.

Consolidation (Continued)

Foreign currency translation

Functional and presentation currency

Items included in the financial statements of each entity in the Group are measured using the currency of the primary economic environment in which the entity operates ("the functional currency"). The consolidated financial statements are presented in thousands of Mauritian rupee.

In the separate financial statements of the Company, items are measured using the currency of the primary economic environment in which the Company operates (the "functional currency"). The separate financial statements are presented in thousands of Mauritian rupee, which is the Company's functional currency.

• Transactions and balances

Transactions denominated in foreign currencies are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year-end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in profit or loss.

Foreign exchange gains and losses that relate to borrowings and cash and cash equivalents are presented in profit or loss within 'finance income or cost'. All other foreign exchange gains and losses are presented in profit or loss within 'other operating income - net'.

Translation differences on non-monetary financial assets and liabilities are reported as part of the fair value gain or loss. Translation differences on non-monetary financial assets such as equities classified as financial assets at fair value through other comprehensive income are included in other comprehensive income.

Group companies

The results and financial position of all the group entities that have a functional currency different from the presentation currency are translated into the presentation currency as follows:

- assets and liabilities for each statement of financial position presented are translated at the closing rate at the date of the statement of financial position;
- income and expenses for each income statement are translated at average exchange rate, unless the average exchange rate is not a reasonable approximation of the cumulative effect of the rates prevailing on the transaction date, in which case income and expenses are translated at the dates of the transactions; and
- all resulting exchange differences are recognised in other comprehensive income.

On consolidation, exchange differences arising from the translation of the net investment in foreign operations are taken to other comprehensive income. When a foreign operation is partially disposed of or sold, exchange differences that were recorded in equity are recognised in profit or loss as part of the gain or loss on sale.

Goodwill and fair value adjustments arising on the acquisition of a foreign entity are treated as assets and liabilities of the foreign entity and translated at the closing rate. Exchange differences arising are recognised in other comprehensive income.

#### Financial assets

The Group classifies its financial assets in the following categories: at fair value through profit or loss, financial assets held at amortised cost and financial assets at fair value through other comprehensive income. The classification depends on the purpose for which the financial assets were acquired. The directors determine the classification of its financial assets at initial recognition.

• Financial assets at fair value through profit or loss

Financial assets at fair value through profit or loss are financial assets held for trading. A financial asset is classified in this category if acquired principally for the purpose of selling in the short term. Assets in this category are classified as current assets if expected to be settled within 12 months; otherwise, they are classified as non-current.

• Financial assets held at amortised cost

Financial assets held at amortised cost are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. They are included in current assets, except for maturities greater than twelve months after the end of the reporting period. These are classified as non-current assets.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Financial assets (Continued)

• Financial assets at fair value through other comprehensive income (FVOCI)

The Group's financial assets held at amortised cost comprise 'financial assets held at amortised cost' and 'cash and cash equivalents' in the statements of financial position .Financial assets that are held for collection of contractual cash flows and for selling the assets, where the assets' cash flows represent solely payments of principal and interest, and that are not designated at FVPL, are measured at fair value through other comprehensive income (FVOCI). When the financial asset is derecognised, the cumulative gain or loss previously recognised in OCI is reclassified from equity to profit or loss. Interest income from these financial assets is included in 'Interest income' using the effective interest rate method.

The Group classifies its financial assets in the following categories: at amortised cost, at fair value through profit or loss and at fair value through other comprehensive income. The classification depends on the business model and whether the Group's business model is to hold these for collection of contractual cash flows, and the cash flows represent solely payments of principal and interest on the principal amount, or for sale or both. The Group determines the classification of its financial assets on initial recognition.

Subsequent measurement

Financial assets held at amortised cost

Financial assets held at amortised cost are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. They are included in current assets, except for maturities greater than 12 months after the end of the reporting period. These are classified as non-current assets. The Group's financial assets held at amortised cost comprise 'trade receivables' in the statement of financial position. Subsequent measurement of financial assets held at amortised cost is at amortised cost given that these are assets that are held for collection of contractual cash flows where those cash flows represent solely payments of principal and interest are measured at amortised cost. Interest income from these financial assets is included in finance income using the effective interest rate method. Any gain or loss arising on derecognition is recognised directly in the statement of comprehensive income and presented in other gains/ (losses) together with foreign exchange gains and losses. Impairment losses are presented as separate line item in the statement of comprehensive income.

#### Equity instruments

The Group subsequently measures all equity investments at fair value. The Directors have elected to present fair value gains and losses on equity investments in statement of other comprehensive income and there is no subsequent reclassification of fair value gains and losses to the statement of comprehensive income following the derecognition of the investment. Dividends from such investments are to be recognised in the statement of comprehensive income as other income when the Group's right to receive payments is established.

Changes in the fair value of financial assets at FVPL are recognised in other gains/losses in the statement of comprehensive income as applicable.

Impairment of financial assets

The Group applies the IFRS 9 simplified approach to measuring ECL which uses a lifetime expected loss allowance for trade receivables except for ILA which meets the criteria for eligibility of a temporary exemption from the application of IFRS 9 until 2023.

Trade receivables have been grouped based on shared credit characteristics and the days past due. The expected loss rates are based on the payment profiles of sales over the last 3 years and the corresponding historical credit losses experienced within this period. The historical loss rates are adjusted to reflect current and forward-looking information on macro-economic factors affecting the ability of the customers to settle the receivables. The Group has identified Gross Domestic Product (GDP) to be the most relevant factor, and accordingly adjusts the historical loss rates.

A financial asset is credit-impaired when one or more events that have a detrimental impact on the estimated future cash flows of that financial asset have occurred. Evidence that a financial asset is credit impaired include observable data about the following events:

- a. significant financial difficulty of the issuer or the borrower:
- b. a breach of contract, such as a default or past due event;
- c. the lender(s) of the borrower, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concession(s) that the lender(s) would not otherwise consider;
- d. it is becoming probable that the borrower will enter bankruptcy or other financial reorganisation;
- e. the disappearance of an active market for that financial asset because of financial difficulties; or
- f. the purchase or origination of a financial asset at a deep discount that reflects the incurred credit losses.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Property, plant and equipment

Freehold land and buildings and buildings on leasehold land are shown at fair value, based on a periodic but at least triennial valuation by external independent valuers, less subsequent depreciation for buildings. Valuations are performed with sufficient regularity to ensure that the fair value of a revalued asset does not differ materially from its carrying amount. Any accumulated depreciation at the date of revaluation is eliminated against the gross carrying amount of the assets, and the net amount is restated to the revalued amount of the asset. All other property, plant and equipment is stated at historical cost less depreciation. Historical cost includes expenditure that is directly attributable to the acquisition of the items.

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably. The carrying amount of the replaced part is derecognised. All other repairs and maintenance are charged to profit or loss during the financial period in which they are incurred.

Increases in the carrying amount arising on revaluation of freehold land and buildings and buildings on leasehold land are credited to other comprehensive income and shown as revaluation reserve in shareholders' equity. Decreases that offset previous increases of the same asset are charged in other comprehensive income and debited against the revaluation reserve directly in equity; all other decreases are charged to profit or loss.

Land is not depreciated. Depreciation on other assets is calculated using the straight-line method to allocate their cost or revalued amounts to their residual values over their estimated useful lives, as follows:

Buildings and buildings on long leasehold land 2.0% to 5.0%
Plant, equipment and other assets 10.0% to 50.0%
Motor vehicles 20.0% to 33.0%
Furniture and fittings 5.0% to 22.0%

The assets' residual values and useful lives are reviewed, and adjusted if appropriate, at the end of each reporting period. An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is greater than its estimated recoverable amount. At the date of revaluation, the carrying amount must equal the fair value. This is done by by adjusting the gross book value of the asset and accumulated depreciation; or by eliminating accumulated depreciation and adjusting the gross book value of the asset to equal revalued amount.

Gains and losses on disposals are determined by comparing the proceeds with the carrying amount and are recognised within 'Other operating income/(expenses)-net' in profit or loss. On disposal of revalued assets, the surplus on revaluation remaining in revaluation reserve for these assets is transferred to retained earnings.

Borrowing costs incurred for the construction of any qualifying asset are capitalised during the period of time that is required to complete and prepare the asset for its intended use. Other borrowing costs are expensed.

#### Investment property

Properties that are held for long-term rental yields or for capital appreciation or both, and that are not occupied by the Group or the Company, are classified as investment properties. Investment properties comprise office buildings and retail outlets leased out under operating lease agreements.

Some properties may be partially occupied by the Group, with the remainder being held for rental income or capital appreciation. If that part of the property occupied by the Group can be sold separately, the Group accounts for the portions separately. The portion that is owner-occupied is accounted for under IAS 16, and the portion that is held for rental income or capital appreciation or both is treated as investment property under IAS 40. When the portions cannot be sold separately, the whole property is treated as investment property only if an insignificant portion is owner-occupied. The Group considers the owner-occupied portion as insignificant when the property is more than 95% held to earn rental income or capital appreciation. In order to determine the percentage of the portions, the Group uses the size of the property measured in square metre.

Recognition of investment properties takes place only when it is probable that the future economic benefits that are associated with the investment property will flow to the entity and the cost can be measured reliably. This is usually when all risks are transferred.

Investment properties are measured initially at cost, including transaction costs. The carrying amount includes the cost of replacing parts of an existing investment property at the time the cost has incurred if the recognition criteria are met; and excludes the costs of day-to-day servicing of an investment property. Subsequent to initial recognition, investment properties are stated at fair value, which reflects market conditions at the reporting date. Gains or losses arising from changes in the fair value of investment properties are included in profit or loss in the year in which they arise.

Subsequent expenditure is included in the asset's carrying amount only when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably. All other repairs and maintenance costs are charged to profit or loss during the financial period in which they are incurred.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

*Investment property (continued)* 

The fair value of investment properties is based on the nature, location and condition of the specific asset. The fair value is calculated on the basis of recent transactions in similar properties adjusted, if necessary, for any difference in the nature, location or condition of the specific asset. The fair value of investment property does not reflect future capital expenditure that will improve or enhance the property and does not reflect the related future benefits from this future expenditure. These valuations are performed annually by external appraisers.

The Group only enters as lessor into lease agreements that are classified as operating leases (IAS 17). A lease is classified as an operating lease if it does not transfer substantially all the risks and rewards incidental to ownership. The properties leased out under operating leases are included in 'Investment properties'. Lease incentives are recognised as a reduction of rental income on a straight-line basis over the lease term. The Group makes payments to agents for services in connection with negotiating lease contracts with the Group's lessees. The letting fees are capitalised within the carrying amount of the related investment property and depreciated over the lease term.

Right of use assets

Following the adoption of IFRS 16, the Group has presented the right of use assets separately in the statement of financial position. Alternatively, the Group may choose to resent right of use assets that do not meet the definition of investment property within property, plant and equipment.

Right-of-use assets are measured at cost comprising the following:

- the amount of the initial measurement of lease liability
- · any lease payments made at or before the commencement date less any lease incentives received
- any initial direct costs.

Right-of-use assets are generally depreciated over the shorter of the asset's useful life and the lease term on a straight-line basis. If the group is reasonably certain to exercise a purchase option, the right-of-use asset is depreciated over the underlying asset's useful life. While the group revalues its land and buildings that are presented within property, plant and equipment, it has chosen not to do so for the right-of-use buildings held by the group.

Payments associated with short-term leases of equipment and vehicles and all leases of low-value assets are recognised on a straight-line basis as an expense in profit or loss. Short-term leases are leases with a lease term of 12 months or less. Low-value assets comprise of IT equipment and small items of office furniture.

Insurance contracts

#### (a) Classification

One of the Group's subsidiary issues contracts that transfer insurance risk. Insurance contracts are those contracts that transfer significant insurance risk. Such contracts may also transfer financial risk. As a general guideline, the Group defines as significant insurance risk the possibility of having to pay benefits on the occurrence of an insured event that are at least 10% more than the benefits payable if the insured event did not occur.

#### (b) Recognition and measurement

The Group issues long-term insurance contracts with fixed and guaranteed terms. These contracts insure events associated with human life (for example death, or survival) over a long duration. Premiums are recognised as revenue when they become payable by the contract holder. Premiums are shown before deduction of commission.

Benefits are recorded as an expense when they are incurred.

A liability for contractual benefits that are expected to be incurred in the future is recorded when the premiums are recognised. The liability is determined as the sum of the expected discounted value of the benefit payments and the future administration expenses that are directly related to the contract, less the expected discounted value of the theoretical premiums that would be required to meet the benefits and administration expenses based on the valuation assumptions used (the valuation premiums).

The liability is based on assumptions as to mortality, persistency, maintenance expenses and investment income that are established at the time the contract is issued. A margin for adverse deviations is included in the assumptions.

The liabilities are recalculated at each reporting date using the assumptions established at valuation date.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Insurance contracts (Continued)

#### (c) Minimum capital requirement test

As required by the Long Term Insurance Solvency Rules, an insurer shall at all times maintain a solvency margin that is at least equal to the Minimum Capital Requirement. The Minimum Capital Requirement for an insurer shall be determined by its actuary as the higher of a stress test requirement determined in accordance with guidelines issued by the Financial Services Commission to ensure that the long-term insurer remains solvent or the higher of an amount of Rs 25 million or an amount representing 13 weeks' operating expenses. The purpose of the set stress requirement is to quantify the minimum level of assets in excess of liabilities so as to enable the insurer to meet all the obligations as and when they are due and to provide sufficient cushion against adverse deviations in experience in any of the variables used in the valuation of liabilities. Stress Test Requirements equals the higher of the "Termination Capital Adequacy Requirements" (TCAR) and the "Ordinary Capital Adequacy Requirements" (OCAR).

As set out in (b) above, long-term insurance contracts with fixed terms are measured based on assumptions set out at the valuation date.

#### (d) Reinsurance contracts held

Contracts entered into by one of the Group's subsidiaries with reinsurers under which the subsidiary is compensated for losses on one or more contracts issued by the subsidiary and that meet the classification requirements for insurance contracts in (a) above are classified as reinsurance contracts held. Contracts that do not meet these classification requirements are classified as financial assets. Insurance contracts entered into by the subsidiary under which the contract holder is another insurer (inwards reinsurance) are included with insurance contracts.

The benefits to which the subsidiary is entitled under its reinsurance contracts held are recognised as reinsurance assets. These assets consist of short-term balances due from reinsurers (classified within financial assets held at amortised cost), as well as longer term receivables (classified as reinsurance assets) that are dependent on the expected claims and benefits arising under the related reinsured insurance contracts. Amounts recoverable from or due to reinsurers are measured consistently with the amounts associated with the reinsured insurance contracts and in accordance with the terms of each reinsurance contract

Reinsurance liabilities are primarily premiums payable for reinsurance contracts and are recognised as an expense when due. In certain cases a reinsurance contract is entered into retrospectively to reinsure a notified claim under the subsidiary's property or casualty insurance contracts. Where the premium due to the reinsurers differs from the liability established by the subsidiary for the related claim, the difference is amortised over the estimated remaining settlement period.

The subsidiary assesses its reinsurance assets for impairment on a quarterly basis. If there is objective evidence that the reinsurance asset is impaired, the subsidiary reduces the carrying amount of the reinsurance asset to its recoverable amount and recognises that impairment loss in profit or loss. The subsidiary gathers the objective evidence that a reinsurance asset is impaired using the same process adopted for financial assets held at amortised cost. The impairment loss is also calculated following the same method used for these financial assets.

#### (e) Receivables and payables related to insurance contracts

Receivables and payables are recognised when due. These include amounts due to and from agents, brokers and insurance contract holders. If there is objective evidence that the insurance receivable is impaired, the Company reduces the carrying amount of the insurance receivable accordingly and recognises that impairment loss in profit or loss. The Company gathers the objective evidence that an insurance receivable is impaired using the same process adopted for financial assets held at amortised cost. The impairment loss is also calculated under the same method used for these financial assets.

#### Intangible assets

#### (a) Goodwill

Goodwill arises on the acquisition of subsidiaries, associates and joint ventures and represents the excess of the consideration transferred over the Group's interest in net fair value of the net identifiable assets, liabilities and contingent liabilities of the acquiree and the fair value of the non-controlling interest in the acquiree.

For the purpose of impairment testing, goodwill acquired in a business combination is allocated to each of the CGUs, or groups of CGUs, that is expected to benefit from the synergies of the combination. Each unit or group of units to which the goodwill is allocated represents the lowest level within the entity at which the goodwill is monitored for internal management purposes. Goodwill is monitored at the operating segment level.

Goodwill impairment reviews are undertaken annually or more frequently if events or changes in circumstances indicate a potential impairment. The carrying value of goodwill is compared to the recoverable amount, which is the higher of value in use and the fair value less costs to sell. Any impairment is recognised immediately as an expense and is not subsequently reversed.

### **STATEMENTS**

#### 31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Intangible assets (Continued)

(b) Computer software costs

Acquired computer software licenses are capitalised on the basis of costs incurred to acquire and bring to use the specific software.

These costs are amortised over their estimated useful life (5 years).

Costs associated with developing or maintaining computer software programmes are recognised as an expense as incurred.

(c) Patent rights and licences

Separately acquired patents and licences are initially recognised at cost. Subsequently, they are carried at cost less amortisation. Amortisation is calculated using the straight-line method to allocate the cost of patent and licences over their useful lives of 5 - 15 years.

(d) Indefeasible Rights of Use ("IRU")

Capacity purchased on an Indefeasible rights of use ("IRU") basis is shown under non-current assets. The IRU is amortised on a straight-line basis over the contract period of 15 years from the effective date of the IRU's purchase. Remaining useful life is approximately is 7 years.

#### Impairment of non-financial assets

Intangible assets are not subject to amortisation and an assessment is made at each reporting date whether there is any impairment indication. An impairment loss is recognised for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less costs to sell and value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units). Prior impairment of non-financial assets (other than goodwill) are reviewed for possible reversal at each reporting date. There were no indicators of impairment during the year hence an impairment assessment was not deemed necessary as the ongoing factors which might have triggered an indication such as the Russian invasion of Ukraine did not have a direct impact on the Group.

#### Trade receivables

Trade receivables are amounts due from customers for goods and services sold in the ordinary course of the business. They are generally due for settlement within 30 and 90 days and therefore are all classified as current. Trade receivables are recognised initially at the amount of consideration that is unconditional unless they contain significant financing components, when they are recognised at fair value. The Group holds the trade receivables with the objective to collect the contractual cash flows and therefore measures them subsequently at amortised cost using the effective interest method. The Group and Company apply the IFRS 9 simplified approach to measuring ECL which uses a lifetime expected loss allowance for trade receivables.

Trade receivables have been grouped based on shared credit characteristics and the days past due. The expected loss rates are based on the payment profiles of sales over the last 3 years and the corresponding historical credit losses experienced within this period. The historical loss rates are adjusted to reflect current and forward-looking information on macro-economic factors affecting the ability of the customers to settle the receivables. The Group has identified Gross Domestic Product (GDP) to be the most relevant factors, and accordingly adjusts the historical loss rates based on expected changes in these factors.

#### Inventories

Inventories are stated at the lower of cost and net realisable value. Cost is determined using the average cost ("AVCO") method and includes all costs incurred in bringing the inventories to their present location and condition. The cost of finished goods and work-in progress comprises purchase price, materials and all applicable expenses. It excludes borrowing costs. Net realisable value is the estimated selling price in the ordinary course of business, less applicable variable selling expenses.

#### Property held for resale

Non-current assets are classified as held for sale when their carrying amount is to be recovered principally through a sale transaction and sale is considered highly probable. They are stated at the lower of carrying amount and fair value less costs to sell

#### Common Control transactions

Common control transactions occur frequently, particularly in the context of reorganizations. Combinations between entities that are under common control are excluded from the scope of the business combinations. Common control transactions are generally accounted for by the receiving entity based on the nature of the transactions. The accounting for common control transactions is based on the nature of what is transferred or exchanged as part of the transaction.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

#### Cash and cash equivalents

In the statement of cash flows, cash and cash equivalents includes cash in hand, deposits held at call with banks, other short-term highly liquid investments with original maturities of three months or less and bank overdrafts. In the statement of financial position, bank overdrafts are shown within borrowings in current liabilities.

#### Contingent assets

Contingent assets are possible assets whose existence will be confirmed by the occurrence or non-occurrence of uncertain future events that are not wholly within the control of the entity. These are treated as off-balance sheet items but have been disclosed in Note 32(ii) since it is more likely than not that an inflow of benefits will occur.

#### Share capital

Ordinary shares are classified as equity.

#### Trade payables

Trade payables are obligations to pay for goods and services that have been acquired in the ordinary course of business from suppliers. Accounts payable are classified as current liabilities if payment is done within one year or less. If not they are presented as non-current liabilities. Trade payables are recognised initially at fair value and subsequently measured at amortised cost using the effective interest method.

#### Borrowings

Borrowings are recognised initially at fair value, net of transaction costs incurred. Borrowings are subsequently stated at amortised cost; any difference between the proceeds (net of transaction costs) and the redemption value is recognised in profit or loss over the period of the borrowings using the effective interest method.

Fees paid on the establishment of loan facilities are recognised as transaction costs of the loan to the extent that it is probable that some or all of the facility will be drawn down. In this case, the fee is deferred until the draw-down occurs.

To the extent there is no evidence that it is probable that some or all of the facility will be drawn down, the fee is capitalised as a pre-payment for liquidity services and amortised over the period of the facility to which it relates.

Borrowings are classified as current liabilities unless the Group has an unconditional right to defer settlement of the liability for at least 12 months after the end of the reporting period.

#### Current and deferred income tax

The tax expense for the period comprises current and deferred income tax. Tax is recognised in profit or loss, except to the extent that it relates to items recognised in other comprehensive income or directly in equity. In this case, the tax is also recognised in other comprehensive income or directly in equity. The current income tax charge is calculated on the basis of the tax laws enacted or substantively enacted at the end of the reporting period in the countries where the Company's subsidiaries and associates operate and generate taxable income. The directors periodically evaluate positions taken in tax returns with respect to situations in which applicable tax regulations is subject to interpretation. It establishes provisions where appropriate on the basis of amounts expected to be paid to the tax authorities.

Deferred income tax is provided in full, using the liability method, on all temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the financial statements. However, deferred tax liabilities are not recognised if they arise from the initial recognition of goodwill, deferred income tax is not accounted for if it arises from initial recognition of an asset or liability in a transaction other than a business combination that at the time of the transaction affects neither accounting nor taxable profit or loss. Deferred income tax is determined using tax rates (and laws) that have been enacted or substantively enacted by the end of the reporting period and are expected to apply when the related deferred income tax asset is realised or the deferred income tax liability is settled.

Deferred income tax assets are recognised to the extent that it is probable that future taxable profit will be available against which the temporary differences can be utilised.

Deferred income tax is provided on temporary differences arising on investments in subsidiaries and associates, except for deferred income tax liability where the timing of the reversal of the temporary difference is controlled by the group and it is probable that the temporary difference will not reverse in the foreseeable future.

Deferred income tax assets and liabilities are offset when there is a legally enforceable right to offset current tax assets against current tax liabilities and when deferred income tax assets and liabilities relate to income taxes levied by the same taxation authority on the same taxable entity.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

#### Provisions

Provisions are recognised when: the Group has a present legal or constructive obligation as a result of past events; it is probable that an outflow of resources will be required to settle the obligation; and the amount has been reliably estimated. Restructuring provisions comprise lease termination penalties and employee termination payments. Provisions are not recognised for future operating losses.

Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. A provision is recognised even if the likelihood of an outflow with respect to any one item included in the same class of obligations may be small.

Provisions are measured at the present value of the expenditures expected to be required to settle the obligation using a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the obligation. The increase in the provision due to passage of time is recognised as interest expense.

#### Provision for asset retirement obligations

This provision relates to the estimated cost of dismantling and removing an item of property, plant and equipment and restoring the site on which the item is located to its original condition. The Group provides for the anticipated costs associated with the restoration of leasehold property to its original condition at inception of the lease, including the removal of items included in plant and equipment that is erected on leased land.

The Group only recognises these decommissioning costs for the proportion of its overall number of sites for which it expects decommissioning to take place. The expected percentage has been based on actual experience in the respective operations.

A provision is made for the present value of the estimated future decommissioning costs at the end of the life of the site/expected lease term. When this provision gives rise to future economic benefits, an asset is recognised, otherwise the costs are charged to profit or loss. The estimated cost is discounted at a pre-tax rate that reflects current market assessments of the time value of money. The increase in the decommissioning provision due to the passage of time is recognised as a finance cost.

#### Employee benefits

#### (a) Pension obligations

The Group has both defined benefit and defined contribution plans. Typically, defined benefit plans define an amount of pension benefit that an employee will receive on retirement, usually dependent on one or more factors such as age, years of service and compensation. A defined contribution plan is a pension plan under which the Group pays fixed contributions into a separate entity. The Group has no legal or constructive obligations to pay further contributions if the fund does not hold sufficient assets to pay all employees the benefits relating to employee service in the current and prior periods.

#### • Defined benefit pension

Group companies operate various pension schemes for employees eligible for a defined benefit schemes. The schemes are generally funded through payments to insurance companies or trustee-administered funds, determined by periodic actuarial calculations.

The liability recognised in the statement of financial position in respect of defined benefit pension plans is the present value of the defined benefit obligation at the end of the reporting period less the fair value of plan assets. The defined benefit obligation is calculated annually by independent actuaries using the projected unit credit method. The present value of the defined benefit obligation is determined by discounting the estimated future cash outflows using interest rates of high-quality corporate bonds that are denominated in the currency in which the benefits will be paid and that have terms to maturity approximating to the terms of the related pension liability. In countries where there is no deep market in such bonds, the market rates on government bonds are used.

Actuarial gains and losses arising from experience adjustments and changes in actuarial assumptions are charged or credited to other comprehensive income in the period in which they arise.

Past-service costs are recognised immediately in profit or loss.

Where employees are not covered under defined pension scheme, the present value of severance allowances calculated on the basis the enacted laws in the countries where the respective entity operates has been provided for. The present value of severance allowances has been disclosed within unfunded obligations under retirement benefit obligations.

#### • Defined contribution plan

For defined contribution plans, the Group pays contributions to publicly or privately administered pension insurance plans on a mandatory, contractual or voluntary basis. The Group has no further payment obligations once the contributions have been paid. The contributions are recognised as employee benefit expense when they are due. Prepaid contributions are recognised as an asset to the extent that a cash refund or a reduction in the future payments is available.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Employee benefits (continued)

#### (b) Other post-employment obligations

Some group companies provide post-retirement healthcare and other benefits apart from pensions to their retirees. The entitlement to these benefits is usually conditional on the employee remaining in service up to retirement age and the completion of a minimum service period. The expected costs of these benefits are accrued over the period of employment using the same accounting methodology as used for defined benefit pension plans. Actuarial gains and losses arising from experience adjustments and changes in actuarial assumptions are charged or credited to other comprehensive income in the period in which they arise. These obligations are valued annually by independent qualified actuaries.

#### (c) Termination benefits

Termination benefits are payable when employment is terminated by a group entity before the normal retirement date, or whenever an employee accepts voluntary redundancy in exchange for these benefits. The Group recognises termination benefits at the earlier of the following dates: (a) when the Group can no longer withdraw the offer of those benefits; and (b) when the entity recognises costs for a restructuring that is within the scope of IAS 37 and involves the payment of termination benefits. In the case of an offer made to encourage voluntary redundancy, the termination benefits are measured based on the number of employees expected to accept the offer. Benefits falling due more than 12 months after the end of the reporting period are discounted to their present value.

#### (d) Profit-sharing and bonus plans

The Group recognises a liability and an expense for bonuses and profit-sharing, based on a formula that takes into consideration the profit attributable to the company's shareholders after certain adjustments. The Group recognises a provision where contractually obliged or where there is a past practice that has created a constructive obligation.

#### Leases

Until the 2018 financial year, leases of property, plant and equipment were classified as either finance leases or operating leases. From 1 January 2019, leases are recognised as a right-of-use asset and a corresponding liability at the date at which the leased asset is available for use by the group.

Until 31 December 2018, leases of property, plant and equipment where the group, as lessee, had substantially all the risks and rewards of ownership were classified as finance leases. Finance leases were capitalised at the lease's inception at the fair value of the leased property or, if lower, the present value of the minimum lease payments. The corresponding rental obligations, net of finance charges, were included in other short-term and long-term payables. Each lease payment was allocated between the liability and finance cost. The finance cost was charged to profit or loss over the lease period so as to produce a constant periodic rate of interest on the remaining balance of the liability for each period. The property, plant and equipment acquired under finance leases was depreciated over the asset's useful life, or over the shorter of the asset's useful life and the lease term if there is no reasonable certainty that the group will obtain ownership at the end of the lease term.

Leases in which a significant portion of the risks and rewards of ownership are retained by the lessor are classified as operating leases. Payments made under operating leases (net of any incentives received from the lessor) are charged to profit or loss on a straight-line basis over the period of the lease.

Lease income from operating leases where the group is a lessor is recognised in income on a straight-line basis over the lease term. Initial direct costs incurred in obtaining an operating lease are added to the carrying amount of the underlying asset and recognised as expense over the lease term on the same basis as lease income. The respective leased assets are included in the balance sheet based on their nature. The group did not need to make any adjustments to the accounting for assets held as lessor as a result of adopting the new leasing standard.

Revenue from contracts with customers and rental income recognition

#### **Performance Obligations**

Revenue from contracts with customers is recognised to the extent that it is probable that the economic benefits will flow to the group and revenue can be reliably measured. In short, revenue is recognised by reference to each distinct performance obligation in the contract with the customer. The Group serves across diverse industries including telecommunications, media, information and technology, real estate, tourism, hospitality, retail, financial services and energy and its main sources of revenue are across the following clusters.

### **STATEMENTS**

31 December 2022 (Continued)

#### 1 SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)

Revenue from contracts with customers and rental income recognition (Continued)

The Telecommunications, Media and IT cluster entails the provision of services which includes: mobile revenue, roaming and interconnect, enterprise revenue, tower rental deferred revenue, business intelligence, IT consulting and project management services, subscription television direct to home satellite broadcasting and re- broadcasting services and from sale of telephone and equipment.

The Real estate cluster includes rental income from the leasing out of property. Rental income which is generated from operating leases on investment properties is included in the Statement of Profit or Loss owing to its operating nature. For the tourism and hospitality cluster, revenue is generated from provision of hotel and travel services which includes the invoiced value for room, food and beverages, air tickets and other hotel and travel services, net of value added tax and discounts.

The Retail cluster derives revenue from the transfer of goods at a point in time and is measured at the fair value of the consideration received or receivable, stated net of discounts, returns, allowances and value added taxes.

#### **Timing of Revenue Recognition**

The group derives most of its revenue from the sale of goods and services. Revenue is recognised at a point in time when control of the goods or services rendered are actually transferred to the customer. Generally, this is when the goods are delivered to the customer or services provided and when the performance obligation is satisfied, that is, when control of the goods or services rendered is actually transferred to the customer. Revenue is recognised from services provided over time as customers simultaneously receive and consume the benefits provided to them. Each service is deemed as distinct and signifies a performance obligation.

Life assurance fund

At the end of every year the amount of the liabilities of the life assurance fund is established. Effective from the year 2004, the adequacy of the fund is determined annually by actuarial valuation. Under current legislation, an annual actuarial reporting is required by Financial Services Commission. Based on the annual actuarial valuation, the actuary recommends the bonus declaration and the amount of actuarial surplus that can be transferred from profit or loss.

Dividend distribution

Dividend distribution to the Group's shareholders is recognised as a liability in the Group's financial statements in the period in which dividends are approved by the Group's shareholders.

#### 2 FINANCIAL RISK MANAGEMENT

The Group's activities expose it to a variety of financial risks: market risk, credit risk and liquidity risk.

Market risk is the risk of loss due to the factors that affect an entire market or asset class. Market risk is also known as undiversifiable risk because it affects all asset classes and is unpredictable. Three primary sources of risk affect the overall market: foreign exchange risk, equity price risk and interest rate risk.

The Group's overall financial risk management programme focuses on the unpredictability of financial markets and seeks to minimise potential adverse effects on the financial performance of the Group. Gearing has been calculated on the financial position of the Group.

Risk management is carried out under policies approved by the Board of directors.

(a) Market risk

• Foreign exchange risk

The Group operates internationally and is exposed to foreign exchange risk arising from various currency exposures, primarily with respect to the United States dollar ("USD"), Euro ("EUR"), Great Britain Pound ("GBP") and Indian rupee ("INR"). Foreign exchange risk arises from future commercial transactions and recognised assets and liabilities.

Group companies individually manage foreign exchange risk against their functional currency by forecasting their requirements for foreign currencies and retaining, wherever possible, such amounts necessary to settle amounts denominated in foreign currencies. The Group companies also use leading and lagging to behave from currency fluctuations.

### **STATEMENTS**

31 December 2022 (Continued)

#### 2 FINANCIAL RISK MANAGEMENT (CONTINUED)

· Equity Price risk

Equity price risk is the risk that arises from security price volatility - the risk of a decline in the value of a security or a portfolio.

Due to the fact that the Group holds shares in Bharti Airtel and Airtel Africa which are listed on the Bombay Stock Exchange and National Stock Exchange respectively, the Group is exposed to equity securities price risk in respect of the financial assets at fair value through other comprehensive income and financial assets at fair value through profit or loss. The Group's strategy for its financial assets at fair value through OCI is to hold them for long term capital appreciation and is not influenced by short term market fluctuations and not held for trading purposes. However, the Directors monitor the equity markets on a daily basis and the Board of Directors meet on a regular basis to review the performance of these investments as these investments are listed on overseas stock exchanges and are subject to volatility in terms of price and foreign exchange as well.

The financial assets at fair value through other comprehensive income consists primarily of investment in a company incorporated in India and listed on the Bombay Stock Exchange and the National Stock Exchange. During the year ended 31 December 2022, the market price of this investment has gained **18%** (2021 – 34%) of its value compared to the market price in 2021. At 31 December 2022, if the price of the investment had increased / decreased by a further **18%** (2021 – 34%), with all variables held constant, equity would have been **Rs 90 million** (2021 – Rs 158 million) higher/ lower.

The value of quoted shares held at fair value through profit or loss would have increased/decreased by **Rs 38 million** (2021 – Rs 41 million) if a change of 10% occurred in the share price. The value of unquoted shares held at fair value through profit or loss would have increased/decreased by **Rs 10 million** (2021 – Rs 11 million) if a change of 10% occurred in the share price.

The Group is not exposed to any other significant price risk at 31 December 2022.

• Interest rate risk

The Group analyses its interest rate exposure on a dynamic basis as borrowings are both at fixed and floating interest rates. Various scenarios are simulated taking into consideration refinancing, renewal of existing positions and alternative financing. Based on these scenarios, the Group calculates the impact on profit or loss of a defined interest rate shift. For each simulation, the same interest rate shift is used for all currencies. The scenarios are run only for liabilities that represent the major interest-bearing positions.

The Group takes on exposure to the effects of fluctuations in the prevailing levels of market interest rates on with respect to its interest bearing assets and liabilities.

The significant interest-bearing assets include loans, hire purchase debtors and cash at bank. The loans arising on the life assurance business are on a fixed interest rate basis and are not subject to interest rate fluctuations. Interest on hire purchase debtors is fixed by law and is also not subject to interest rate fluctuations. The effective interest rate on cash and cash equivalents was **0.03%** (2021 – 0.02%); the impact of a 0.75% shift would cause a maximum shift in the post tax profit of **Rs 6,679,000** (2021 – Rs 2,756,000).

With respect to interest-bearing liabilities, significant interest rate risk arises on the Group bank loans which are at variable rates. The effective interest charge on bank loans was **3.1%** (2021 – 2.7%); the impact of a 0.75% shift would cause a maximum shift in post tax profit of **Rs 55,402,000** (2021 – Rs 49,274,000).

The Company's effective interest charge on bank loans was **4.4%** (2021 – 3.6%); the impact of a 0.75 % shift would cause a maximum shift in post tax profit of **Rs 20,938,000** (2021 – Rs 20,940,000).

(b) Credit risk

Credit risk relate to the risk of a counterparty defaulting on its contractual obligations emanating into financial loss to the Group and the Company. Credit risk arises from cash and cash equivalents, financial assets held at amortised cost and financial assets at fair value through OCI.

To manage credit risk with respect to cash and cash equivalents, the Group and Company transacts with only highly reputable financial institutions, with high quality S&P and Moody's ratings. The Directors have assessed that the credit risk associated with cash and cash equivalents is insignificant based on the historical information of the financial strengths of the financial institutions.

Due to the diversity of the Group's activities, the credit risks associated with each type of receivables are managed according to their nature and are described below. The credit quality of these receivables is provided in Note 18. Credit risk is managed through regular discussions of directors with the CFO on the exposure of the Group and Company to credit risk and critical assessment of the Group's and Company's provision matrix which is detailed in Note 18.

### **STATEMENTS**

31 December 2022 (Continued)

#### 2 FINANCIAL RISK MANAGEMENT (CONTINUED)

#### (b) Credit risk (Continued)

The credit quality of financial assets at fair value through OCI is disclosed in Note 16. Credit risk is managed by the Board of each subsidiary.

#### Trade receivables

The Group has policies in place to control the level of debts to ensure that sale of products and services are made to customers with an appropriate credit history. Such policies include credit vetting before sale, setting up credit limits, disconnection (cellular phone and pay TV subscribers) and subscription payments through direct debits amongst others.

#### Loans and other loans receivable

Exposure to credit risk for loans receivable is managed through analysis of the ability of borrowers to meet interest and capital repayment obligations and by changing the lending limits where appropriate.

#### Hire purchase debtors

Hire purchase debtors comprise of a wide variety of customers buying on hire purchase facilities and are from different sectors of the economy. The Group has no significant concentrations of credit risk and has policies in place to ensure that the vetting criteria are assessed and reviewed in order to take into consideration economic realities. All credit applications go through a rigorous vetting process and material contracts are subject to management approval. At the level of operations, outstanding debts are continuously monitored and relevant provisions/diminution in value is recognised as and when they become apparent.

The maximum exposure to credit risk is represented by the book values of the receivables carried in the statement of financial position without taking into account the value of any collateral obtained. Hire purchase debtors are secured over the hire purchase assets and the latter's fair values approximate the carrying amounts of hire purchase debtors at the reporting date.

#### Rating of assets bearing credit risks

The remaining assets bearing credit risks are unrated. \*The ratings for foreign investments were taken from ratings provided by Standard & Poor's. \*\* The ratings for local equity (MCB and SBM) and for government treasury bills and notes were taken from ratings provided by Moody's. \*\*\* The ratings for local equity were taken from ratings provided by Care Ratings. The unrated assets consist of equity investments, secured housing and policy loans, unsecured and secured loans receivable from related parties, other receivables, fixed deposits from financial institutions and cash balances.

### **STATEMENTS**

31 December 2022 (Continued)

#### 2 FINANCIAL RISK MANAGEMENT (CONTINUED)

#### (c) Liquidity risk

Liquidity risk arises in a situation where the Group and Company are unable to meet their short-term financial obligations without incurring losses. The Group and Company faces liquidity risk as their financial liabilities are subject to contractual payments. Prudent liquidity risk management policies implies maintaining sufficient cash, the availability of funding through an adequate amount of committed credit facilities and the ability to close out market positions. Due to the dynamic nature of the underlying businesses, the finance department aims at maintaining flexibility in funding by keeping committed credit lines available. Bank overdraft limits are regularly monitored and management conducts quarterly review of the subsdiaries' statement of cash flows.

The tables below analyses the Group's and Company's financial liabilities into relevant maturity groupings based on the remaining period at the reporting date to the contractual maturity date. The amounts disclosed in the table are the contractual undiscounted cash flows. Trade and other payables are due within 12 months and therefore approximate their carrying balances as the impact of discounting is not significant.

### **STATEMENTS**

31 December 2022 (Continued)

#### 2 FINANCIAL RISK MANAGEMENT (CONTINUED)

#### (d) Concentration Risk

Concentration risk describes the level of risk in an organisation's portfolio arising from concentration to a single counterparty. Concentration risk can arise from uneven distribution of exposures (or loan) to its borrowers. Within the Group, there is a risk that the loans granted to related parties are impaired due to unfavourable circumstances. Concentration risk measurement is based on the percentage of the related party loans to the total debt of the Group can be used a measure. As at 31 December 2022, the concentration risk of the Group was deemed to be negligible.

#### (e) Fair value estimation

The fair value of financial assets at fair value through OCI that are traded in active markets is based on quoted market prices at the reporting date. The quoted market price used for financial assets held by the Group and Company is the current bid price.

The fair value of financial instruments that are not traded in an active market (for example, unquoted shares) is determined using valuation techniques. The Group and Company use a variety of methods and make assumptions that are based on market conditions existing at each reporting date. Quoted market prices or dealer quotes for similar instruments are used for long term debt. Other techniques, such as discounted cash flows, are used to determine the fair value of the remaining instruments.

The carrying amounts of financial assets held at amortised cost less impairment provision are assumed to approximate their fair values. The carrying values of financial liabilities also approximate their fair values.

· Fair values hierarchy

In accordance with the amendment to IFRS 13, the Group and Company classify fair value measurements using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. The fair value hierarchy has the following levels:

- Quoted prices (unadjusted) in active markets for identical assets or liabilities (level 1).
- Inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly (that is, as prices) or indirectly (that is, derived from prices) (level 2).
- Inputs for the asset or liability that are not based on observable market data (that is, unobservable inputs) (level 3).

Land and buildings (Note 10)		8,404	-	8,404
Total assets	3	8,404	17,975	26,382

The fair values of the loans approximate their carrying amounts.

The Group is exposed to equity securities and debt securities price risks. If the fair value of the investments increases/ decreases by 5%, other factors remaining unchanged, the Group's profit for the year and financial assets (at fair value through profit or loss and financial assets at fair value through OCI) would increase/decrease by **Rs 82,409,150** (2021 - Rs 92,662,000).

The Group's financial assets valued at fair value through profit or loss are directly related to the fair valuation of the investee entity. The investee entity uses various valuations methods to value its underlying investment assets. Level 3 includes all investments classified as financial assets at fair value through profit or loss. The investments have been valued using the share of net asset value ("NAV") of the respective investee companies. At 31 December 2022, had the fair value increased/decreased by **1%** (2021- 1%), the carrying amount would have increased/decreased by **Rs 1,045,080** (2021 - Rs 1,148,610).

The Group is exposed to equity securities and debt securities price risks as described in Note 2(a).

Following valuation of land and buildings during the year ended 31 December 2022, some assets have been classified under Level 3 (priorly in Level 2 during year ended 31 December 2021).

#### (e) Capital risk management

The subsidiary's objectives when managing capital are to safeguard the Group's ability to continue as a going concern in order to provide returns for shareholders and benefits for other stakeholders and to maintain an optimal capital structure to reduce the cost of capital. In order to maintain or adjust the capital structure, the Group may adjust the amount of dividends paid to shareholders, return capital to shareholders, issue new shares or sell assets to reduce debt.

The Group monitors capital on the basis of the gearing ratio. This ratio is calculated as net debt divided by total capital. Net debt is calculated as total borrowings (including 'current and non-current borrowings') as shown in the statement of financial position less cash and cash equivalents. The Group regards 'equity' as shown in the statement of financial position as being capital. Total capital is calculated as capital plus net debt.

The Board of Directors assesses the impact of each significant new investment on the gearing of the Group and Company as part of the investment appraisal process on a quarterly basis. The Group and Company have met all their debt covenants with their respective financial institutions. The gearing ratios at 31 December 2022 and 2021 were as follows and are within the target set by the Board of 60%-85%:

GRO	GROUP		PANY
2022	2021	2022	2021
Rs'000	Rs'000	Rs'000	Rs'000

#### 2 FINANCIAL RISK MANAGEMENT (CONTINUED)

(f) Financial risk arising in the Life Assurance Business subsidiary (the "LABS")

The following relate to the LABS which is the subsidiary that operates a life assurance business.

The LABS exposes the Group to a range of financial risks through its financial assets, financial liabilities, reinsurance assets and insurance liabilities. In particular, the key financial risk is that in the long-term its investment proceeds are not sufficient to fund the obligations arising from its insurance contracts. The most important components of this financial risk are interest rate risk, equity price risk, foreign currency risk and credit risk. These risks arise from open positions in interest rate, currency and equity products, all of which are exposed to general and specific market movements. The risks that the LABS and the Group face are primarily interest rate risk and equity price risk.

The LABS manages financial risks via its Investment Committee which is mandated to achieve long-term investment returns in excess of its obligations under insurance and investment contracts. The principal technique of the Investment Committee is to match assets to the liabilities arising from insurance and investment contracts by reference to the type of benefits payable to contract holders. For each distinct class of liabilities, a separate portfolio of assets is maintained. The LABS has not changed the processes used to manage its risks from previous periods.

#### Fixed and guaranteed insurance contracts

Insurance contracts with guaranteed and fixed terms have benefit payments that are fixed and guaranteed at the inception of the contract. The financial component of these benefits is usually a guaranteed fixed interest rate (for the insurance contracts, this rate may apply to maturity and/or death benefits) and hence the LABS's primary financial risk on these contracts is the risk that interest income and capital redemptions from the financial assets backing the liabilities is insufficient to fund the guaranteed benefits payable.

#### Liquidity risk

Liquidity risk is the risk that the LABS is unable to meet its obligations when they fall due as a result of policyholder benefit payments, cash requirements from contractual commitments, or other cash outflows, such as debt maturities. Such outflows would deplete available cash resources for operational, trading and investments activities. In extreme circumstances, lack of liquidity could result in reductions in the statement of financial position and sales of assets, or potentially an inability to fulfil policyholder commitments. The risk that the LABS will be unable to do so is inherent in all insurance operations and can be affected by a range of institution-specific and marketwise events including, but not limited to, credit events, systemic shocks and natural disasters

The LABS is exposed to daily calls on its available cash resources with regard to claims and maintains a certain level of cash resources in the bank to service the daily claims. Investments are also made in certain liquid investments such as Government Treasury bills and investments in equity shares that are traded in active markets and can be readily disposed of. The Company has also made arrangements in its reinsurance programme to cater for large claims whereby its reinsurers will pay their share of these losses within a short period of time through cash calls.

#### Mismatch risk

All insurance liabilities are asset backed. Mismatch risk arises when the nature, term and currency of backing assets are different from the nature, term and currency of liabilities. Nature of liabilities refers to whether they are fixed, indexed or variable (DPF) at the LABS's discretion.

The following tables indicate the contractual amount and timing of cash flows arising from the insurance liabilities and the extent of duration-matching for these contracts. They summarise the Company's exposure to interest rate risks for these assets and liabilities. When debt securities mature, the proceeds not needed to meet the liability cash flows will be re-invested in floating rate securities, and the interest rate swaps are used to secure fixed interest rate cash flows. The reinvestment of these net positive proceeds in the earlier years will fund the negative cash flows displayed in the table below for the later years.

Life insurance - life	923,714	236,609	196,884	157,968	195,639
Outstanding claims	24,224	24,224	-	-	-
Trade and other payables	72,454	72,454	-	-	-
Total	1,020,392	333,287	196,884	157,968	195,639

The liability period analysis does not agree with the total carrying amount due to the fact that the period analysis is undiscounted whilst the total carrying amount is discounted.

**Rs 9,827,029** (2021: Rs 14,177,908) for deposit from policyholders has been excluded from Trade and other payables.

The Company intends to manage the net cash outflows position arising from Year 5 onwards as follows:

- Mismatch risk
- Available-for-sale investments would be reinvested in similar instruments at maturity;
- The value of investment portfolio classified as "financial assets at fair value through profit or loss" is expected to increase in the future as the Company realises the fair value gain upon sale of investments and proceeds are reinvested in similar instruments:
- Amount of loans disbursed, other than mortgaged loans, is expected to increase and hence, the interest income generated from these loans would increase.

### **STATEMENTS**

### 31 December 2022 (Continued)

#### 3 MANAGEMENT OF INSURANCE RISK

The LABS issues contracts with the following risk characteristics:

- Transfer of mortality/morbidity risks, with partial transfer of investment risks (participating policies);
- Transfer of mortality/morbidity risks only (pure protection policies);
- Transfer of mortality/morbidity and investment risks (guaranteed savings type policies) and
- Transfer of longevity risks (pension policies).

#### **Mortality/Morbidity Risks**

These are risks that higher than expected deaths/disability claims are paid out by the LABS. Management of these risks is by way of:

#### (i) Growing the portfolio

Law of large numbers implies that predictability of claims (in aggregate) increases as the portfolio grows. This reduces the LABS's exposure to extreme variability in claims pay-out.

#### (ii) Underwriting

This refers to the identification of risk at various landmark of the policy lifetime. In particular, the following main types of underwriting are used:

- At inception, medical underwriting (as per Grid) is carried out to ensure that the prospect adheres to the minimum health requirements set by the LABS and its reinsurer;
- At inception, financial underwriting is carried out to identify the paying capacity of prospects as well as the justification for insurance;
- At inception, pastime underwriting and/or occupation underwriting identifies risky activities and ensures that the premiums charged is commensurate with the risk at hand; or
- Claims underwriting, as the name suggests, examines the conditions of the death/disability claims and whether any breach of policy conditions may exist.

#### (iii) Actuarial assumptions

These are set based on the LABS's actual mortality/morbidity experience and are reviewed on an annual basis.

#### (iv) Reinsurance

Variability in claims pay-out is mopped up by reinsurers who participate in claims above the LABS's retention limit. The LABS uses individual surplus reinsurance and all amounts in excess of Rs 500,000 are reinsured. The split between gross and net of reinsurance sums assured is given below:

	2022	2021
	Rs'million	Rs'million
Individual Business Sum Assured		
Gross of Reinsurance	9,205	7,709
Net of Reinsurance	2,955	2,941
Group Business Sum Assured		
Gross of Reinsurance	1,544	1,581
Net of Reinsurance	594	618

#### **Longevity Risks**

This is the risk of the insured living longer than expected. The LABS manages such risks by using conservative actuarial assumptions where it is typically assumed that the insured lives live longer than the life expectancy as per the South African mortality tables (SA 85/90). Annual checks are also carried out to ensure that pension is being paid to pensioners who are still alive

INTEGRATED REPORT 2022 245

----

### **STATEMENTS**

31 December 2022 (Continued)

#### 3 MANAGEMENT OF INSURANCE RISK (CONTINUED)

#### **Investment Risks**

This is the risk that investment returns are lower than expected. The LABS manages this risk by:

- Holding a diversified investment portfolio;
- Adopting a long term investment strategy approved by the actuary;
- Keeping a matched investment position (e.g. guaranteed products are backed by fixed income and bond type investments);
- Setting the investment return target in accordance with the pricing and reserving assumptions;
- Smoothing of bonuses by using a 3-year declaration period and Adjusting bonuses to reflect actual market performance.
- Adjusting bonuses to reflect actual market performance.

#### Long term insurance contracts

For long term insurance contracts, where the insured event is death, the most significant factors that could negatively impact the insurance claims submitted to the LABS are diseases like heart problems, diabetes, high blood pressure or changes in lifestyle, such as eating habits, smoking and lack of exercise, resulting in higher claims being submitted to the LABS.

For contracts where survival is the insured risk, the most significant factor is continued improvement in medical science and social conditions that would increase longevity. The liabilities in terms of insurance contracts are based on recommendations of the LABS's Actuary.

The table below presents the concentration of insured benefits across five bands of insured benefits per individual life assured.

### Benefits assured per life assured

at the end of 2022	Total benefits insured

### **STATEMENTS**

31 December 2022 (Continued)

### 3 MANAGEMENT OF INSURANCE RISK (CONTINUED)

#### Long term insurance contracts (continued)

Insurance risk for contracts disclosed in this note is also affected by the policyholders' right to pay reduced or no future premiums, to terminate the contract completely, or to exercise a guaranteed annuity option. As a result, the amount of insurance risk is also subject to policyholders' behaviour. On the assumption that policyholders will make decisions rationally, overall risk can be assumed to be aggravated by such behaviour.

The risk under any one insurance contract is the possibility that the insured event occurs and the uncertainty of the amount of the resulting claim. By the very nature of an insurance contract, this risk is random and therefore unpredictable.

For a portfolio of insurance contracts where the theory of probability is applied to pricing and provisioning, the principal risk that the LABS faces under its insurance contracts is that the actual claims and benefit payments exceed the carrying amount of the insurance liabilities. This could occur because the frequency or severity of claims and benefits are greater than estimated. Insurance events are random, and the actual number and amount of claims and benefits will vary from year to year from the level established using statistical techniques.

Experience shows that the larger the portfolio of similar insurance contracts, the smaller the relative variability about the expected outcome will be. In addition, a more diversified portfolio is less likely to be affected by a change in any subset of the portfolio. The LABS has developed its insurance underwriting strategy to diversify the type of insurance risks accepted and within each of these categories to achieve a sufficiently large population of risks to reduce the variability of the expected outcome

Factors that aggravate insurance risk include lack of risk diversification in terms of type and amount of risk, geographical location and type of industry covered.

### (a) Frequency and severity of claims

Insurance risk for contracts disclosed in this note is also affected by the contract holders' right to pay reduced or no future premiums, to terminate the contract completely, or to exercise a guaranteed annuity option. As a result, the amount of insurance risk is also subject to contract holder behaviour. On the assumption that contract holders will make decisions rationally, overall insurance risk can be assumed to be aggravated by such behaviour. For example, it is likely that contract holders whose health has deteriorated significantly will be less inclined to terminate contracts insuring death benefits than those contract holders remaining in good health. This results in an increasing trend of expected mortality, as the portfolio of insurance contracts reduces due to voluntary terminations.

The actual mortality claim experience versus expected are shown below:

Year	Actual no of death Claims	Actual Death	Expected Death Claim (Rs)	Actual Claim/
		Claim (Rs)		Expected Claim (%)
2011	41	3,575,562	8,191,451	44
2012	31	3,848,552	10,868,957	35
2013	39	4,709,953	12,334,995	38
2014	29	4,784,529	15,479,908	31
2015	34	10,795,677	19,588,505	55
2016	38	4,625,979	23,432,984	20
2017	41	12,770,307	10,308,235	124
2018	40	6,600,452	10,060,485	66
2019	30	5,965,709	7,525,000	79
2020	42	8,307,955	6,500,000	128
2021	53	12,995,233	7,300,000	178
2022	47	5,077,281	6,000,000	85
Overall	465	84,057,189	137,590,520	61

The LABS has factored the impact of contract holders behaviour into the assumptions used to measure these liabilities associated with long term insurance contracts.

### **STATEMENTS**

31 December 2022 (Continued)

### 3 MANAGEMENT OF INSURANCE RISK (CONTINUED)

#### Long term insurance contracts (continued)

(a) Frequency and severity of claims (continued)

Claim Frequency & Reinsurance Recoveries

The table below shows the number of death/morbidity claims and reinsurance recoveries.

	2022	2021
No of death/morbidity claims		
Individual Life	40	49
Group	7	4
	2022	2021
Reinsurance recoveries	Rs'000	Rs'000
Individual Life	15,573	5,750

In relation to the portfolio at risk, the incidence of death/morbidity claims has been stable, as evidenced by the actuarial assumptions used for the year end valuation.

(b) Sources of uncertainty in the estimation of future benefit payments and premium receipts

Uncertainty in the estimation of future benefit payments and premium receipts for long-term insurance contracts arises from the unpredictability of long-term changes in overall levels of mortality and the variability in contract holder behaviour.

The LABS uses appropriate base tables of South African mortality tables (SA 85/90). An investigation into the actual experience of the LABS over the last three years is carried out, and statistical methods are used to adjust the crude mortality rates to produce a best estimate of expected mortality for the future.

Where data is sufficient to be statistically credible, the statistics generated by the data are used without reference to an industry table. Where this is not the case, the best estimate of future mortality is based on standard industry tables adjusted for the LABS's overall experience.

For contracts that insure survival, an adjustment is made for future mortality improvements based on trends identified in the data and in the continuous mortality investigations performed by independent actuarial bodies. The impact of any historical evidence of selective termination behaviour will be reflected in this experience. The LABS maintains voluntary termination statistics to investigate the deviation of actual termination experience against assumptions. The LABS Actuaries use statistical methods to determine appropriate termination rates. An allowance is then made for any trends in the data to arrive at a best estimate of future termination rates.

The LABS currently monitors default premiums by sending default reminder notices to clients requesting for payment of unpaid premium. Besides policyholders are also given the option to revive their policies for which certain conditions have to be met according to the revival policies and guidelines. Pricing of all new products is determined by the actuary after thorough consideration of the mortality tables as per actuarial guides. Process used to decide on assumptions.

(c) Process used to decide on assumptions

Assumptions used to work out future liabilities under long-term insurance contracts are estimated by the LABS and its actuaries. Firstly, best estimate assumptions are worked out based on past experience and expectations of future developments. These are then adjusted with prescribed margins, as per the FSC solvency rules and actuarial guidance notes.

Mortality

Estimates are made as to the expected number of deaths for each of the years in which the LABS is exposed to risk. These estimates are based on South African mortality tables (SA 85/90) (in the absence of local ones), adjusted where appropriate (e.g. for AIDS) to reflect the local experience. For contracts that insure the risk of longevity, prudent allowance is made for expected mortality improvements. Prescribed and additional margins are built into these estimates to allow for future uncertainty.

Morbidity

Given the low financial significance of morbidity on the LABS and its predictability, morbidity tables are not used to model morbidity claims. A simpler approach used by the actuaries is to compare morbidity premiums against morbidity claims and work out any inadequacy in the premiums charged. For the last three years, this exercise has shown that the premiums are enough to cover expected claims. Any major change to morbidity experience in the industry will however be modelled differently. Morbidity risk is managed by ensuring proper underwriting and ensuring that proper reinsurance treaties are in place that limit risk to what is acceptable according to the LABS's Risk Appetite Statement.

Expenses

Expenses are estimated on a going concern basis. Per policy, expenses are split between acquisition and renewal expenses. Expenses incurred for the benefit of policies to be sold in the future are amortised over the relevant future period. Provision is made for the impact of future business volumes and inflation on expenses. The risk of expense overruns is managed by proper budgeting process, constant monitoring of expenses against budget throughout the year and by ensuring sufficient volumes are sold and/or acquired to support the expense base.

### **STATEMENTS**

31 December 2022 (Continued)

### 3 MANAGEMENT OF INSURANCE RISK (CONTINUED)

#### Long term insurance contracts (continued)

- (c) Process used to decide on assumptions (continued)
  - Investment Income

Future investment return is estimated for each asset class and split between income return and capital gains. The starting point for this estimate is the risk free rate of return (government bonds) reflecting expectations of future economic and financial developments. The risk premium corresponding to the different asset types is then added based on the various risk profiles, asset term, capital growth and comparable yielding investments.

Inflation

Investment income and inflation assumption are inter-twined. The gap between risk free returns and inflation over the last 20 years is worked out and projected into the future.

Persistency

Policy lapses/surrenders are estimated from historical LABS and industry available data. These are adjusted to reflect changes in the legal, tax and business environment (e.g. removal of tax incentives or inability to surrender pension plans). Uncertainty in the estimation of future benefit payments and premium receipts for long-term insurance contracts arises from the unpredictability of long-term changes in overall levels of mortality and the variability in contract holder behaviour. The LABS uses South African mortality base tables (SA85/90) according to the type of contract being written. An investigation into the actual experience of the LABS is carried out, and the LABS's actuary use statistical methods to compare the fit of the mortality tables with the actual claims experience. Adjustments to the selected standard mortality table are then worked out to optimise the fit of the mortality model.

• Uncertainty in premium income

The LABS's actuary builds in provision for non-receipts of future premiums (arising from deaths, withdrawals, surrenders, defaults, etc.) due in his valuation basis. Future premiums on business in force as at the valuation date are modelled by projecting the probability adjusted cashflows to the valuation date. This basis is used to determine the position of the life fund every year. Further, cost of all new products is determined by the actuary after thorough consideration of the key assumptions.

• Uncertainty in payment of benefits

Uncertainty in benefit paym-nts arises from changes in underlying mortality trends (eg mortality improvement, increasing life expectancies) and the economic environment. The actuary builds in margins in his valuation assumptions that reflect mortality improvements/deterioration, as warranted by the particular policy being valued. For example, for endowment plans, higher deaths than expected will be a source of uncertainty in benefit payouts while for annuities; uncertainty arises from higher life expectancy. Bonus rates are used to reduce uncertainty in payouts due to changes in the economic environment. Bonus rates are not guaranteed and are reviewed in line with current and future market prospects.

(d) Sensitivity analysis

At 31 December 2022, the actuarial liability in respect of the life business issued by the LABS amounted to **Rs 1,051,183,000** (2021 - 1,140,336,000) as assessed by the LABS's actuary. The following table presents the sensitivity of the value of insurance liabilities to movements in the assumptions used in the estimation of insurance liabilities.

Assumptions	Change in Variable	liability	Change in liability
		2022	2021
		Rs'000	Rs'000
Worsening of mortality	+ 5% p.a.	(1,060)	1,322
Drop on Return on investment	- 2% p.a.	135,311	169,658
Worsening of renewal expense rate	+ 10% p.a.	9,012	12,480
Worsening of lapse rate	+ 10% p.a.	(10,982)	(15,400)

The LABS's activities expose it to a variety of financial risks, including the effects of changes in debt and equity market prices, foreign currency exchange rates and interest rates. The LABS's overall risk management program focuses on the unpredictability of financial markets and seeks to minimise potential adverse effects on the financial performance of the LABS.

### 5 OTHER OPERATING INCOME - NET (CONTINUED)

Profit on disposal of property, plant and equipment relate mostly to the disposal of technical equipment of Emtel Ltd. Following the launch of 5G technology in July 2022, Emtel Ltd has modernised its equipment by disposing of its obsolete assets to a third party.

'Others' relate mostly to deposits forfeited.

The net income and expenses of the life assurance business is accounted under other income above and the surplus or deficit is recognised under Life Assurance Funds (Note 23).

#### 9 INCOME TAX EXPENSE

The Group is liable to income tax on its profits, as adjusted for income tax purposes at the average tax rate of **17%** (2021 - 17%), of which 2% relates to Corporate Social Responsibility Fund. At 31 December 2022, the Group and Company had accumulated tax losses of **Rs 703,158,000** (2021 - Rs 818,934,000) and **Rs 527,401,000** (2021 - Rs 605,817,000) respectively.

Solidarity levy is calculated at the rate of 5 per cent of the "book profit" of Emtel Ltd and 1.5 per cent of its turnover and is payable in the following year.

### **STATEMENTS**

31 December 2022 (Continued)

#### 9 INCOME TAX EXPENSE (CONTINUED)

The Company had a disagreement with the Mauritius Revenue Authority (MRA) as regards whether the concessionary tax rate of 15% continued to apply to the Company in the years 2005 and 2006 (instead of 25% and 22.5% respectively as was then applicable), the Company paid the total amount claimed by the MRA of Rs 80.4 million (tax assessment of Rs 47.8 million plus penalties and interest of Rs 32.6 million). After objecting to the MRA's assessments, the Company then lodged representations before the ARC. In November 2013, the ARC dismissed Emtel's representations. The Company appealed to the Supreme Court against the ARC's determination. On 20th January 2023, the Supreme Court delivered a judgement dismissing Emtel's application for judicial review. On 7th and 8th February 2023, the Company lodged an application for permission to appeal that judgement to the Judicial Committee of the Privy Council. This amount was disclosed under Financial Assets Held at Amortised Cost during year ended 31 December 2021. Following the Supreme Court judgement on 20th January 2023, which subsequently have an impact on the state of matters during year ended 31 December 2022, the amount has been classified under under Note 9(a)(ii).

The revaluation surplus was credited to revaluation reserves.

No property, plant and equipment is pledged as security for borrowings. For security on borrowings, see note 24.

The write offs relate to assets which will not be available for use in the future due to obsolescence and wear and tear.

Asset in progress consists of project cost capitalised relating to technical equipment acquired by Emtel Limited and Emtel Technopolis Ltd, which were not available for use at 31 December 2021.

Fair Values of land and buildings

The Group's land and buildings were revalued, based on fair value model, on 31 December 2022 by independent valuers namely Noor Dilmohamed & Associates and Elevante Property Services (new valuer during the year). They have the appropriate qualifications and recent experience in the valuation of land and buildings in the relevant locations.

Noor Dilmohamed & Associates carried out valuation on market comparison approach. The valuation of land and buildings has been determined using the fair value basis. To provide an indication about the reliability of the inputs used in determining fair value, the Group has classified its land and buildings into the three levels prescribed under the accounting standards. Elevante carried out valuation based on income approach this year, while valuation on these assets by Noor Dilmohamed & Associates was based market approach last year. The valuation has been prepared in accordance with the RICS Valuation - Global Standards, 2022, which adopts and applies the International Valuation Standards (IVS) published by the International Valuation Standards Council (IVSC). The income approach was deemed more reasonable for these assets as the estimate the future value of a property and the cash flow that the property would generate are more relevant to the business model of the Group.

The revaluation surplus net of applicable deferred income taxes was credited to other comprehensive income and is shown in revaluation reserves' in shareholders' equity.

### STATEMENTS

31 December 2022 (Continued)

### 10 PROPERTY, PLANT AND EQUIPMENT (CONTINUED)

Level 2 fair values of land and buildings have been derived using the sales comparison approach. Sales prices of comparable land and buildings in close proximity are adjusted for differences in key attributes such as property size. The most significant unobservable input into this valuation approach is price per square meter. Level 3 fair values of land and buildings have been derived using the income approach. The key observable inputs used are:

Discount Rate 10.75% - 11%
Terminal Rate 7.50% - 8%

The properties sensitivity matrix for the largest properties classified under Level 3 is as follows:

### 11 INVESTMENT PROPERTIES (CONTINUED)

The Group's land and buildings were revalued, based on fair value model, on 31 December 2022 by independent valuers namely Noor Dilmohamed & Associates and Elevante Property Services (new during the year). They have the appropriate qualifications and recent experience in the valuation of land and buildings in the relevant locations.

Noor Dilmohamed & Associates carried out valuation on market comparison approach. The valuation of land and buildings has been determined using the fair value basis. To provide an indication about the reliability of the inputs used in determining fair value, the Group has classified its land and buildings into the three levels prescribed under the accounting standards. Elevante carried out valuation based on income approach this year compared to market approach last year. The valuation has been prepared in accordance with the RICS Valuation – Global Standards, 2022, which adopts and applies the International Valuation Standards (IVS) published by the International Valuation Standards Council (IVSC). This change in valuation is attributed to the fact that this is a more appropriate approach for income generating assets based on industry conditions prevailing during the current year. Therefore, the valuation of some of the buildings moved from level 2 to level 3, as indicated by the table as follows:

#### (ii) Costs associated to lease

Costs associated to lease

The costs associated to lease consist of expenses incurred by a subsidiary, (IKO (Mauritius) Hotel Limited), to comply with Article 21 of the Industrial Site Lease Agreement with respect to relocation of National Coast Guard, construction of public access road, re-routing of existing services and upgrading of public beach. The costs incurred are amortised with effect from the date of handing over to the relevant authorities over the remaining life of the lease.

Prepaid operating lease

In 2004, a subsidiary (Emtel Ltd), entered into a land lease agreement with Business Parks of Mauritius Ltd for the lease of 2 acres of land at Ebene CyberCity for a period of 30 years, renewable at the lessee's option for two further consecutive periods of 30 years.

In 2010, a subsidiary (Le Chaland Hotel Limited), deposited Rs 25 million as contribution to the Tourism Fund in connection with the Group's hotel project at La Cambuse. During the year ended 31 December 2015, the Company deposited an additional Rs 23,690,060 to the Tourism Fund, as required by the revised State Land Act. The contribution acts as an up-front payment to the revised land lease agreement dated June 2015, starting as from January 2015. In previous years, the lease rental was being amortised based on the draft lease agreement dated 2010. Upon signature of the revised lease agreement in June 2015, the previous amortisation reserve has been written back and amortisation is being recorded as from January 2015, over a period of 60 years to 2074.

Net book amount:		
At 31 December	5,553,100	5,307,325

As at 31 December 2022, the directors have reviewed the carrying amounts of investments in subsidiaries that have an impairment indicator. A range of methods including income approach, net assets value and market value have been used and the valuation method for each entity has been determined based on the nature and operations of the specific entity. An impairment loss is recognised for the amount by which the investments' carrying amount exceeds the fair value derived from the valuation method.

The only Company with an impairment indicator as at 31 December 2022 as per IAS 36 was Silver Wings Travel Ltd. The discounted cashflow method was used as part of the income approach to assess the recoverable amount at year end. The future cashflow was discounted using the weighted average cost of capital.

A subordinated loan of Rs 70M given by the holding Company during the year ended 31 December 2021, which represents the current investment. As at 31 December 2022, the recoverable amount was estimated to be Rs128M and this was based on a discounted cashflow method based on a forecast of five years, a growth rate of 3% and applying a discount rate of 16.19%. Based on this valuation, the directors concluded no impairment for the year ended 31 December 2022.

	1,116,326	1,304,762	593,729	839,270

The loans to related parties bear interest at a rate of **3.25%** (2021 – 3.25%). The carrying values of the loans to related parties approximate their fair values. The fair values are within level 2 of the fair value hierarchy.

The Group has reviewed the financial strength of all relevant counterparties for all loans and receivables (with the exception of trade receivables which is discussed separately below) and performed a separate ECL review on the other receivables and concludes from these assessment that potential impact of expected credit losses on these balances is immaterial.

Reversal during the year	2,966	1,447
At 31 December	(13,721)	(16,687)
Carrying amount:		
At 31 December	73,237	67,706

GROUP

**GROUP** 

The estimated fair values of the loans are the discounted amount of the estimated cash flows expected to be received. Expected cash flows are discounted at current market rates to determine fair value. The effective interest rates were in the range of **3% to 14%** (2021 – 3% to 14%).

The fair values of the loans approximate their carrying amounts.

At 31 December 2022, loans amounting to **Rs 34,742,929** (2021 - Rs 31,820,875) were overdue which includes impaired and not impaired. These overdue loans receivables are secured by mortgaged properties.

Loans arising on life assurance business, **Rs 138,427,615** (2021 – Rs 143,298,887), are considered neither past due nor impaired when loan instalments are overdue for less than three months. When they are overdue for more than three months, they are tested for impairment individually and are considered impaired when the value of their mortgaged property is less than the carrying value of the loan receivable. The loans are secured against mortgaged properties.

The ageing analysis of the loans arising on the life assurance business which are considered overdue and not impaired were as follows:

		<b>-</b>
	2022	2021
	Rs'000	Rs'000
Between 6 months to 1 year	10,547	9,091
Between 1 to 2 years	2,311	1,399
More than 2 years	5,870	5,316
Total overdue but not impaired originated loans	18,728	15,806
	· · · · · · · · · · · · · · · · · · ·	

The amount of impaired loans amount to **Rs 13,720,586** (2021 - Rs 16,687,030). The other classes within financial assets held at amortised cost do not contain impaired assets.

ncluded in the loans are Rs 382,282 (2021 - Rs 446,067) in respect of loans made to directors and key management personnel.

2021

## **NOTES TO THE FINANCIAL**

### **STATEMENTS**

31 December 2022 (Continued)

#### FINANCIAL ASSETS HELD AT AMORTISED COST (CONTINUED) 18

#### (ii) Other loans

The loans to the parents, Currimjee Ltd and Currimjee Jeewanjee Properties Ltd, are unsecured and bear interests at 4.35% to 6.5% (2021 - 4.25% to 6.5%).

All the other loans bear interest between **3.25%** and **6.5%** (2021- 3.25% and 6.5%).

There are no overdue or non-performing loans.

At 31 December 2022, the carrying values of all loans receivable approximate their fair value.

The directors assess the credit quality of each receivable at a subsidiary level and ensure that appropriate procedures made to ensure credit quality.

#### (iii) Trade receivables

At 31 December 2022, trade receivables include loss allowance on receivables amounting to Rs 112,724,173 (2021 -Rs 156,516,917):

	2022	2021
	Rs'000	Rs'000
Trade receivables - net	305,082	265,179
Provision for impairment	112,724	156,517
Gross amount receivable	417,806	421,696
Neither past due nor impaired	259,398	188,908
Past due but not impaired	45,684	76,271
Past due and impaired	112,724	156,517
Total past due	158,408	232,788
Gross amount receivable	417,806	421,696

The movement in provision for impairment of receivables is as follows:

	2022	2021
	Rs'000	Rs'000
At 01 January	156,517	149,989
Bad debts	-	9,717
Bad debts written off	(43,816)	(1,804)
Reversal for the year	(1,244)	(17,473)
Charge for the year	1,267	16,088
At 31 December	112,724	156,517

The Group and Company applies IFRS 9 simplified approach in measuring the expected credit losses which uses a lifetime expected loss allowance for all its trade receivables. To measure the expected credit losses, trade receivables have been grouped based on shared credit risk characteristics and the days past due.

The expected loss rates are passed on the payment profiles of sales over a period of 36 months before 31 December 2022 or 31 December 2021 respectively and the corresponding historical credit losses experienced within this period. The Company has established a linear relationship of the bad debts with respect to its revenue per year based on historical data adjusted by the growth rate in the percentage of the bad debts on its revenue.

INTEGRATED REPORT 2022

### **STATEMENTS**

31 December 2022 (Continued)

### FINANCIAL ASSETS HELD AT AMORTISED COST (CONTINUED)

#### (iii) Trade receivables (Continued)

On that basis, the loss allowance as at 31 December 2022 and 31 December 2021 was determined as follows for the trade

2022	Current	30 to 60 days	60 to 90 days	More than 90 days	Total
Expected loss rate	0% to 16%	0% to 31%	0% to 56%	3% to 99%	
Gross carrying value (Rs'000)	130,413	77,228	126,177	86,988	417,806
Loss allowance (Rs'000)	1,647	3,700	79,522	27,855	112,724
2021					
Expected loss rate	0% to 22%	0% to 34%	0% to 45%	0% to 99%	
Gross carrying value (Rs'000)	160,689	50,886	4,428	205,693	421,696
Loss allowance (Rs'000)	3,294	2,804	1,162	149,257	156,517

The Group assessed the recoverability of trade receivables based on the debtors capacity to repay their debts. Amount which are considered doubtful are specifically provided for. In addition, a provision under the expected credit loss model is recognised to account for the probability of default upon initial recognition of assets and whether there has been a significant increase in credit risk on an ongoing basis. To assess whether there is a significant increase in credit risk, the Group compares the risk of default occurring on the assets as at the reporting date with the risk of default at date of initial recognition. It considers available reasonable and supportive forward looking information. The Group defines the risk of default as being significant losses in the time value of money.

### (iv) Deposits with financial institutions

Deposits placed with financial institutions have maturities ranging from 1 - 2 years and earn interest at the rate of 3.4%-4.4% (2021 - 2.6%) per annum for the year ended 31 December 2022. Placement is made through a fund manager who ensures the credit quality of these deposits.

At 31 December 2022, statutory deposits comprised of fixed deposit certificates of Rs 10,000,000 (2021 - Rs 10,000,000).

- (v) The maximum exposure to credit risk at reporting date is the carrying value of each class of loans and receivables mentioned
- (vi) The Group does not hold any collateral as security other than already disclosed in note 18(i) and 18(iv).

### (vii) Currency profile of financial assets held at amortised cost

The carrying amounts of the Group's and Company's loans and receivables are denominated in the following currencies:

			••	
	2022	2021	2022	2021
	Rs'000	Rs'000	Rs'000	Rs'000
Mauritian Rupees	890,173	1,041,474	589,389	835,648
US Dollars	49,620	28,585	-	-
Euros	39,982	38,515	-	-
Great Britain Pounds	3,858	7,162	-	-
Other	5,000	-	-	-
	988,633	1,115,736	589,389	835,648

**GROUP** 

**COMPANY** 

Financial assets at amortised cost exclude deposits with financial institutions, amount receivable from MRA, prepayments and deposits.

439,606	653,800	406,607	519,889	

Drasant

Fair value

The Group operates defined benefit pension plans. All of the plans are final salary pension plans, which provide benefits to members in the form of a guaranteed level of pension payable for life. The level of benefits provided depends on members' length of service and their salary in the final years leading up to retirement. Pensions in payment are generally updated in line with the inflation rate and benefit payments for funded obligations are from ILA managed Pension Fund.

The movement in the defined benefit obligation over the year is as follows:

#### Group

	Value of obligation	of plan assets	Total
	Rs'000	Rs'000	Rs'000
At 01 January 2022	970,864	(317,064)	653,800

The Group and Company operate a final salary defined benefit pension plan for its employees. The plan exposes the Group and Company to normal risks associated with defined benefit pension plans, such as investment, interest, longevity and salary risks.

Investment risk: The plan liability is calculated using a discount rate determined by reference to government bond yields; if the return on plan assets is below this rate, it will create a plan deficit and if it is higher, it will create a plan surplus.

Interest risk: A decrease in the bond interest rate will increase the plan liability; however, this may be partially offset by an increase in the return on the plan's debt investments and a decrease in inflationary pressures on salary and pension increases.

Longevity risk: The plan liability is calculated by reference to the best estimate of the mortality of plan participants both during and after their employment. An increase in the life expectancy of the plan participants will increase the plan liability.

Salary risk: The plan liability is calculated by reference to the future projected salaries of plan participants. As such, an increase in the salary of the plan participants above the assumed rate will increase the plan liability whereas an increase below the assumed rate will decrease the liability.

The Company's expected employer contribution for the next year is **Rs 53,783,000** and the weighted average duration of the defined benefit obligation is between 6 and 13 years.

Bank guarantees	55,818	82,267	1,091	2,361

At 31 December 2022, the Group and Company had contingent liabilities in respect of bank guarantees in the ordinary course of business amounting to **Rs 55,818,000** (2021 – Rs Rs 82,267,000) and **Rs 1,091,000** (2021 – Rs 2,361,000) respectively, from which it is anticipated that no material liabilities will arise.

#### 32 (ii) CONTINGENT ASSETS AND LIABILITIES

Emtel v/s ICTA, Mauritius Telecom (MT), Cellplus Mobile Communications and Ministry of Telecommunications

Emtel has lodged a claim for damages in excess of Rs 1 billion (plus interest and costs) against the ICTA, MT, Cellplus and the Ministry of Telecommunications for losses incurred as a result of inter alia failure by the authorities to ensure a level of playing field and unfair competitive practices. The matter was heard over the course of six weeks in May and June 2016. On 9 and 10 August 2017, the Supreme Court handed down its judgment in favour of Emtel awarding it a total amount of Rs 554,139,900 with interest at the legal rate and costs to be paid by all Defendants except the Ministry of Telecommunications. Each of the ICTA, MT and Cellplus have appealed against the judgment to the Court of Civil Appeal. Those three appeals were heard in November 2019, February 2020 and March 2020. On 17 November 2021, the Court of Civil Appeal reversed the judgment of the trial court and dismissed Emtel's claim for damages in two separate judgments. Emtel has appealed against those two appeal judgments to the Judicial Committee of the Privy Council.

### 32 (ii) CONTINGENT ASSETS AND LIABILITIES (CONTINUED)

Silver Wings Ltd was subject to a fraud by the previous accountant. The matter is being handled by Silver Wings's lawyers and a minimum re-imbursement of Rs 20M is expected from the previous accountant, out of which Rs 3M has already been re-imbursed.

Emtel v/s Data Communications Ltd (DCL)

Emtel has sued DCL for unpaid services supplied by Emtel. In the course of the case, DCL has counter claimed the sum of Euros 1.5 million from Emtel for allegedly failing to supply an uninterrupted data service in respect of an International Private Line leased from Emtel. The case is not yet in shape for trial as DCL was subject to both an insolvency process and a receivership. In February 2021, the Court was informed that DCL is no more in receivership. An extension of time was requested to obtain the permission of the Court to proceed against DCL which is in liquidation. The matter is therefore still at pleadings stage. At this point the Board of Directors does not believe that Emtel will be required by the Court to settle the amount claimed by DCL.

#### 33 RELATED PARTY TRANSACTIONS

The Group is directly controlled by Currimjee Limited which owns 62.95% of the Company's shares.

The particulars of the significant transactions carried out with related parties are presented below.

The other receivables from related parties are receivable within 1 year. The terms of loans receivable from and loans payable to related parties are also disclosed below.

CDOUD

COMPANY

During the financial year ended 31 December 2021, IKO (Mauritius) Hotel Limited has signed a subscription agreement with the Mauritius Investment Corporation Ltd ("MIC"), a wholly owned subsidiary of the Bank of Mauritius to issue redeemable convertible bonds for a total amount of Rs 312 million comprising of 312 bonds of Rs 1 million each. One of the main objectives of the MIC is to provide financial support to companies impacted by the Covid-19 pandemic and in particular to the tourism sector which had the worst impact due to the full border closure.

CDOUD

## NOTES TO THE FINANCIAL

## **STATEMENTS**

31 December 2022 (Continued)

### 35 CORRECTION OF PRIOR PERIOD ERRORS

In the prior year, Eight IKO Villas were included under 'asset held for sale'. This amount has been reclassified under 'Inventories' for the year ended 31 December 2021, in line with IAS 2 – Inventories. Eight IKO Villas completed the construction of the villas and these were deemed to be ready for sale. Given the entity is structured as land promoter and developer, properties constructed by the entity, the villas should be classified as inventory. Accordingly, the company has restated the prior year figures in line with the requirement of IAS 8- Accounting policy, changes in accounting estimates and error. Note that the villas were only classified as 'Asset held for sale' as at 31 December 2021 and therefore, this restatement has no impact as at 31 December 2020.

The table below summarises the impact of the adjustment following the reclassification:

		GROUP	
	As previously stated	Adjustments	As restated
	Rs000	Rs000	Rs000
Statement of financial position (extract)			
As at 31 December 2021			
Asset held for sale	317,460	(317,460)	-
Inventories	162,074	317,460	479,534

The above reclassification has no impact on the statement of cash flows and no impact on the statement of comprehensive income

#### **36 SUBSEQUENT EVENTS**

There are no material events after the reporting period which should require disclosure of adjustments to the financial statements for the year ended 31 December 2022.

### 37 PARENT AND ULTIMATE PARENT

The directors regard Currimjee Limited (previously known as Fakhary Limited), a company incorporated in Mauritius, as the Company's parent and ultimate controlling party.

#### 38 INCORPORATION AND REGISTERED OFFICE

The Company is a private limited company incorporated and domiciled in Mauritius. The registered office and place of business of the Company is at 38, Royal Street, Port Louis.
